

Florida Everglades and Key Informational Text

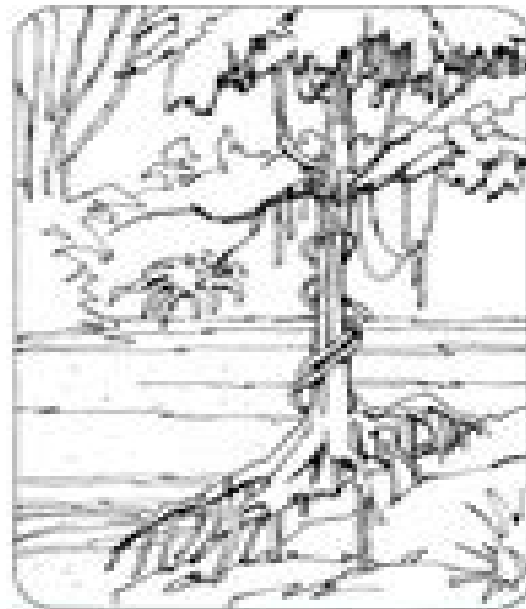

The Everglades and the Florida Keys

The Everglades and the Florida Keys make up the Southern Lowlands. As you read about these two natural wonders, think how they are the same and how they are different.

The Everglades

Water spilling from Lake Okechobee slowly flows southward. This broad, slow-moving stream has created the Everglades, a huge swampland that covers about 5,000 square miles.

Many kinds of plants grow in the Everglades. The chief one is sawgrass. It is a tall, tough plant with teeth so sharp they can cut a person's skin. Another important plant is the mangrove. This unusual tree grows in salt water and sends out roots above the water. The roots collect dirt and leaves, and over time they create small islands. The Everglades are also home to hundreds of kinds of birds and animals.
