The Economics of Climate Change and the Change of Climate in Economics Kevin Maréchal,2013-05-02 Climate change is without question the single most important issue the world faces over the next hundred years The most recent scientific data have led to the conclusion that the globally averaged net effect of human activities since 1750 has been one of warming and that continued greenhouse gas emissions at or above current rates would cause this process to continue to the severe detriment of our environment This unequivocal link between climate change and human activity requires an urgent world wide shift towards a low carbon economy and coordinated policies and measures to manage this transition The starting point and core idea of this book is the long held observation that the threat of climate change calls for a change of climate in economics Inherent characteristics of the climate problem including complexity irreversibility and deep uncertainty challenge core economic assumptions and mainstream economic theory appears inappropriately equipped to deal with this crucial issue Kevin Mar chal shows how themes and approaches from evolutionary and ecological economics can be united to provide a theoretical framework that is better suited to tackle the problem **Global Financial Stability Report, October 2024** International Monetary Fund. Monetary and Capital Markets Department,2024-10-22 Chapter 1 shows that although near term financial stability risks have remained contained mounting vulnerabilities could worsen future downside risks by amplifying shocks which have become more probable because of the widening disconnect between elevated economic uncertainty and low financial volatility Chapter 2 presents evidence that high macroeconomic uncertainty can threaten macrofinancial stability by exacerbating downside tail risks to markets credit supply and GDP growth These relationships are stronger when debt vulnerabilities are elevated or financial market volatility is low during episodes of a macro market disconnect Chapter 3 assesses recent developments in AI and Generative AI and their implications for capital markets It presents new analytical work and results from a global outreach to market participants and regulators delineates potential benefits and risks that may arise from the widespread adoption of these new technologies and makes suggestions for policy responses *Communications and Inequality* Peter Golding,2025-03-07 With growing numbers of billionaires at one end and startling numbers of food banks at the other advanced industrial societies are becoming ever more unequal Yet the evolution and widespread use of new digital media and of a news rich environment bear the promise of unprecedentedly informed
