The World's Future Crisis: Extractive Resources Depletion Shahla Seifi, 2021-10-01 This book focuses mainly on strategic decision making at a global level which is rarely considered in approaches to sustainability This book makes a unique contribution as the work looks at global consequences of mineral exhaustion and steps that can be taken to alleviate the impending problems This book highlights how sustainability has become one of the most important issues for businesses governments and society at large This book explores the topic of sustainability as one that is under much debate as to what it actually is and how it can be achieved but it is completely evident that the resources of the planet are fixed in quantity and once used cannot be reused except through being reused in one form or another This is particularly true of the mineral resources of the planet These are finite in quantity and once fully extracted extra quantities are no longer available for future use This book argues and presents evidence that the remaining mineral resources are diminishing significantly and heading towards exhaustion Once mined and consumed they are no longer available for future use other than what can be recycled and reused This book demonstrates that future scarcity means that best use must be made of what exists as sustainability depends upon this and best use is defined as utility rather than economic value which must be considered at a global level rather than a national level Moreover sustainability depends upon both availability in the present and in the future so the use of resources requires attention to the future as well as to the present This book investigates the alternative methods of achieving the global distribution of these mineral resources and proposes an optimum solution This book adds to the discourse through the understanding of the importance of the depletion and finiteness of raw materials and their use for the present and the future in order to achieve and maintain sustainability Corporate Governance Jonathan R.

Macey, 2010-12-12 Even in the wake of the biggest financial crash of the postwar era the United States continues to rely on Securities and Exchange Commission oversight and the Sarbanes Oxley Act which set tougher rules for boards management and public accounting firms to protect the interests of shareholders Such reliance is badly misplaced In Corporate Governance Jonathan Macey argues that less government regulation not more is what is needed to ensure that managers of public companies keep their promises to investors Macey tells how heightened government oversight has put a stranglehold

on what is the best protection against malfeasance by self serving management the market itself Corporate governance he shows is about keeping promises to shareholders failure to do so results in diminished investor confidence which leads to capital flight and other dire economic consequences Macey explains the relationship between corporate governance and the various market and nonmarket institutions and mechanisms used to control public corporations he discusses how nonmarket corporate governance devices such as boards and whistle blowers are highly susceptible to being co opted by management and are generally guided more by self interest and personal greed than by investor interests In contrast market driven mechanisms such as trading and takeovers represent more reliable solutions to the problem of corporate governance Inefficient regulations are increasingly hampering these important and truly effective corporate controls Macey examines a variety of possible means of corporate governance including shareholder voting hedge funds and private equity funds Corporate Governance reveals why the market is the best guardian of shareholder interests The Governance of Credit Rating Agencies Andrea Miglionico, The global crisis revealed that credit rating agencies CRAs are capable of bringing about potential distortions in the financial sector thereby resulting in a reduction in market confidence which in turn influences negotiations and expectations CRAs need to be held accountable for lack of transparency and inaccurate ratings however the existing regulatory framework does not secure adequate investor protection This book provides a new and important contribution to research in the area at a crucial time in the debate around financial regulation and investment regimes
