Guide to Standard Floras of the World David G. Frodin, 2001-06-14 This 2001 book provides a selective annotated bibliography of the principal floras and related works of inventory for vascular plants The second edition was completely updated and expanded to take into account the substantial literature of the late

twentieth century and features a more fully developed review of the history of floristic documentation. The works covered are principally specialist publications such as floras, checklists, distribution atlases, systematic iconographies and enumerations or catalogues, although a relatively few more popularly oriented books are also included. The Guide is organised in ten geographical divisions with these successively divided into regions and units, each of which is prefaced with a historical review of floristic studies. In addition to the bibliography, the book includes general chapters on botanical bibliography, the history of floras and general principles and current trends, plus an appendix on bibliographic searching, a lexicon of serial abbreviations and author and geographical indexes.

Common Plants of the Inland Pacific Northwest Charles G. Johnson, 1998. Plants of British Columbia Hong Qian, K. Linka, 1998. This book is an up to date checklist of the current valid taxonomy for all vascular plants, bryophytes and lichens in British Columbia, including synonyms, species codes and other information. A convenient geographically restricted comprehensive checklist like this one will aid greatly in avoiding the present confusion concerning the names of many species in the ecological and systematic literature as well as in applied fields. The book is organized into three sections. Part 1 organizes species alphabetically according to taxonomic order by families of vascular plants, bryophytes and lichens. Within each family, the genera are listed alphabetically along with any synonyms, former names and common names. In Part 2, species are organized alphabetically according to their scientific names. Part 3 lists common names followed by their scientific names. Excluded names, names inappropriately applied to plants in B.C. are given in an appendix. Those familiar with plant taxonomy will find Part 1 particularly helpful when checking nomenclature; semi-professionals familiar with scientific names will use Part 2 and then Part 1; those who know only common names will check Part 3 and then Part 2 and Part 1 to determine families. There is presently considerable confusion about many species names in B.C. Plant names change for many reasons and new plants invade. Information about plants in B.C. is scattered in several checklists, most of them incomplete or out of date for some species, such as liverworts; no provincial checklist even exists. This checklist therefore will be useful to all professionals working with vegetation and for students in agriculture, botany, ecology, forestry and other sciences. Although the focus is on B.C., the book will also be useful outside the province, particularly in the northwest American states and in Alberta and the Yukon.

Packrat Middens Julio L. Betancourt, Thomas R. Van Devender, Paul S. Martin, 2021-11-16 Over the past thirty years late Quaternary environments in the arid interior of western North America have been revealed by a unique source of fossils well preserved fragments of plants and animals accumulated locally by packrats and quite often encased amberlike in large masses of crystallized urine These packrat middens are ubiquitous in caves and rock crevices throughout the arid West where they can lie preserved for tens of thousands of years More than a thousand of these deposits have been dated and analyzed and middens have supplanted pollen records as a touchstone for studying vegetation dynamics and climatic change in radiocarbon time the last 40 000 years Now similar deposits made by other mammals like hyraxes are being reported from other parts of the world This book brings together the findings and views of many of the researchers investigating fossil middens in the United States Mexico Africa the Middle East and Australia The contributions serve to open a forum for methodological concerns update the fossil record of various geographic regions introduce new applications and display the vast potential for fossil midden analysis in arid regions worldwide The findings presented here will serve to foster regional research and to promote general studies devoted to global climate change Included in the text are more than two hundred charts photographs and maps
