```

Also, Auto QoS support for Cisco IP phones.

```
LAB_2851(config-if)#auto qos voip cisco-phone
```

Auto QoS is supported on many Cisco switches too. And they too are configured on a port by port basis. When **auto-QoS** is enabled, the **auto qos voip** interface configuration command and the generated configuration are added to the running configuration.

Before configuring auto-QoS on a switch, you should know:

- In most IOS's, auto-QoS configures the switch only for VoIP with Cisco IP phones.
- To take advantage of the auto-QoS defaults, do not configure any standard-QoS commands before entering the auto-QoS commands.
- If necessary, you can fine-tune the QoS configuration, but we recommend that you do so only after the auto-QoS configuration is completed.
- You can enable auto-QoS on static, dynamic-access, voice VLAN access, and trunk ports.
- By default, the CDP is enabled on all interfaces. For auto-QoS to function properly, do not disable the CDP.
- Policing is not enabled with auto-QoS. You can manually enable policing.

On your lab switch enter the following commands to enable Auto QoS.

```
LAB_3550(config)#interface fastethernet 0/13
LAB_2851(config-if)#auto qos voip cisco-phone
LAB_3550(config)#interface fastethernet 0/14
LAB_2851(config-if)#auto qos voip cisco-phone
```

Entering the **show running config** command shows us the changes made on our switch after we ran the **Auto QoS** command.

```
