The authors outline a variety of practical techniques including the simplest that the fields of management, public administration, policy analysis and industrial engineering have to offer. Each analytic technique is introduced in the context of a fictitious case presented over a few pages at the beginning of that technique's chapter. Contents include demand analysis, work distribution analysis, process flow charting, inflation adjustments, annualizing capital costs, staffing analysis, identifying full costs of a program or service, present value analysis, life cycle costing, lease buy analysis, cost effectiveness analysis, benchmarking analysis and more. This updated third edition features a dramatic expansion of Excel based applications, plus templates and exercises accompanying many of the chapters and available online. New chapters prepare readers to use statistical tests to identify significant differences in performance averages, construct Pareto charts, develop cause and effect diagrams, prepare control charts, detect possible discrimination in hiring and appointment practices and present analytic evidence more effectively.
