Numerical Bifurcation Analysis for Reaction-Diffusion Equations Zhen Mei, 2013-03-09 Reaction diffusion equations are typical mathematical models in biology chemistry and physics These equations often depend on various parameters e.g temperature catalyst and diffusion rate etc Moreover they form normally a nonlinear dissipative system coupled by reaction among different substances The number and stability of solutions of a reaction diffusion system may change abruptly with variation of the control parameters Correspondingly we see formation of patterns in the system for example an onset of convection and waves in the chemical reactions This kind of phenomena is called bifurcation Nonlinearity in the system makes bifurcation take place constantly in reaction diffusion processes Bifurcation in turn induces uncertainty in outcome of reactions Thus analyzing bifurcations is essential for understanding mechanism of pattern formation and nonlinear dynamics of a reaction diffusion process However an analytical bifurcation analysis is possible only for exceptional cases This book is devoted to numerical analysis of bifurcation problems in reaction diffusion equations The aim is to pursue a systematic investigation of generic bifurcations and mode interactions of a class of reaction diffusion equations This is realized with a combination of three mathematical approaches numerical methods for continuation of solution curves and for detection and computation of bifurcation points effective low dimensional modeling of bifurcation scenario and long time dynamics of reaction diffusion equations analysis of bifurcation scenario mode interactions and impact of boundary conditions
