R. Wilson,2022-11-04 Despite experiencing our teaching in different times we are both oriented to traditional math teaching It wasn t because we were both taught that way as some may believe but because that method worked for us and we have seen it work for our students It is efficient effective non confusing and helped our students develop mathematical reasoning understanding and confidence Most importantly it helped them to be successful So begins the book on traditional math which provides a glimpse of what explicit instruction looks like in the classroom for

grades K through 8 Barry Garelick and J R Wilson are retired math teachers who describe the methods of traditionally taught math that they used in their teaching Their descriptions serve two purposes 1 It provides assurance to teachers who may already practice these methods that they are not alone and 2 For others it may provide some new ideas **Math Fact Fluency** Jennifer Bay-Williams, Gina Kling, 2019-01-14 This approach to teaching basic math facts grounded in years of research will transform students learning of basic facts and help them become more confident adept and successful at math Mastering the basic facts for addition subtraction multiplication and division is an essential goal for all students Most educators also agree that success at higher levels of math hinges on this fundamental skill But what s the best way to get there Are flash cards drills and timed tests the answer If so then why do students go into the upper elementary grades and beyond still counting on their fingers or experiencing math anxiety What does research say about teaching basic math facts so they will stick In *Math Fact Fluency* experts Jennifer Bay Williams and Gina Kling provide the answers to these questions and so much more This book offers everything a teacher needs to teach assess and communicate with parents about basic math fact instruction including The five fundamentals of fact fluency which provide a research based framework for effective instruction in the basic facts Strategies students can use to find facts that are not yet committed to memory More than 40 easy to make easy to use games that provide engaging fact practice More than 20 assessment tools that provide useful data on fact fluency and mastery Suggestions and strategies for collaborating with families to help their children master the basic math facts *Math Fact Fluency* is an indispensable guide for any educator who needs to teach basic math facts *Arithmetic Counts!* Paul Shoecraft, 2025-01-24 Dr Shoecraft may be the only mathematician since the New Math in the 1960s to seriously analyze the lowly subject of arithmetic and how to teach it His breakthrough came when he experimented with teaching what needs to be understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains By teaching the essence of arithmetic in sensible ways and appealing to children s love of games songs and movement he s proven that virtually ALL children can learn arithmetic the foundation of algebra higher mathematics science technology and more even music When children understand arithmetic they own it It s no lonver just their teacher s math It s their math America s children are being held back in math because of how arithmetic is drug out in elementary school Virtually every textbook based elementary school math program in use today is mind numbing in its repetitiveness from grade to grade The reason for the redundancy is to slow down the teaching of arithmetic so it can be memorized Research shows that the human brain is not designed to remember things learned by rote when no longer practiced That s acknowledged in the use it or lose it aphorism that states the obvious that we remember what we use and forget what we don t You know that to be true if you ve ever forgotten things you once knew as well as your own name things like an old address or a license plate number Every child can understand base ten numeration when taught hands on with arithmetic blocks Thereby every child can understand base ten arithmetic And every child can learn how to

count out the number facts like 5 7 12 17 8 9 6 X 7 42 and 56 7 8 and if they forget one never have to guess and risk ridicule and bad grades if they guess wrong What matters in teaching arithmetic is not how much a child can remember but how much they can figure out if when they forget
