The Climate Solutions Consensus National Council for Science and the Environment,2012-06-22 In 2007 the Intergovernmental Panel on Climate Change shared the 2007 Nobel Peace Prize with former Vice President Al Gore for its reporting on the human causes of climate change In 2008 the National Council for Science and the Environment reported that the acceleration of climate change is already faster than the IPCC projected only a year earlier How we deal with the rapid environmental changes and the human forces that are driving these changes will be among the defining issues of our generation Climate Solutions Consensus presents an agenda for America It is the first major consensus statement by the nation s leading scientists and it provides specific recommendations for federal policies for state and local governments for businesses and for colleges and universities that are preparing future generations who will be dealing with a radically changed climate The book draws upon the recommendations developed by more than 1200 scientists educators and decision makers who participated in the National Council for Science and the Environment s 8th National Conference on Science Policy and the Environment After presenting a lucid narrative of the science behind climate change and its solutions Climate Solutions Consensus presents 35 practical results oriented approaches for minimizing climate change and its impacts It clearly spells out options for technological societal and policy actions And it deals head on with controversial topics including nuclear energy ocean fertilization and atmospheric geo engineering One of the book s key conclusions is that climate solutions are about much more than energy sources They involve re examining everything people do with an eye toward minimizing climate impacts This includes our eating habits consumption patterns transportation building and housing forestry land use education and more According to these scientists the time to act is now With clarity and urgency they tell us exactly what needs to be done to start reversing the driving factors behind climate change minimizing their consequences and adapting to what is beyond our power to stop

Fundamentals of Physics and Chemistry of the Atmosphere Guido Visconti,2013-04-17 This book originates from the translation of an Italian textbook on the physics and chemistry of the atmosphere The idea for this earlier effort came to me after I published in 1989 L Atmosfera a popular science book A few years later I discovered to my great surprise that it was adopted as a textbook by a few univer sities or university courses The publication of the book coincided with the introduction in Italy of a university curriculum on Environmental Science and a partial reform of the physics curriculum that allows the teaching of courses like Atmos pheric Physics Meteorology and Environmental Physics This convinced me to adapt the popular book to a full textbook although the effort turned out to be a much harder job than I thought The content of the present book is not simply the translation from the Italian be cause it has been largely rewritten Still it contains basically what I have been teaching in my courses of Atmospheric Physics and Geophysics in the last twenty years In doing that I have looted many sacred texts These may be divided into two categories there are those like the book by J M Wall ace and P V Hobbs see references wh ich deal mostly with thermodynamics radiation and dynamics at an elementary level and those like the book by 1 Holton J Pedlosky A Gill K Liu etc which are mostly professional texts and in some cases very specific
