Training Manual on Transport and Fluids John C. Neu, 2009-11-30 I have learned a lot from John Neu over the past years and his book reflects very well his sense of style and purpose Walter Craig McMaster University Hamilton Ontario Canada and Fields Institute for Research in Mathematical Sciences Toronto Ontario Canada John Neu's book presents the basic ideas of fluid mechanics and of the transport of matter in a clear and reader friendly way Then it proposes a collection of problems starting with easy ones and gradually leading up to harder ones Each problem is solved with all the steps explained In the course of solving these problems many fundamental methods of analysis are introduced and explained This is an ideal book for use as a text or for individual study Joseph B Keller Stanford University This book presents elementary models of transport in continuous media and a corresponding body of mathematical technique Physical topics include

convection and diffusion as the simplest models of transport local conservation laws with sources as the general framework of continuum mechanics ideal fluid as the simplest model of a medium with mass momentum and energy transport and finally free surface waves in particular shallow water theory There is a strong emphasis on dimensional analysis and scaling Some topics such as physical similarity and similarity solutions are traditional In addition there are reductions based on scaling such as incompressible flow as a limit of compressible flow and shallow water theory derived asymptotically from the full equations of free surface waves More and deeper examples are presented as problems including a series of problems that model a tsunami approaching the shore The problems form an embedded subtext to the book Each problem is followed by a detailed solution emphasizing process and craftsmanship The problems express the practice of applied mathematics as the examination and re examination of simple but essential ideas in many interrelated examples *Applied Mechanics Reviews*, 1986 **The Publishers' Trade List Annual**, 1985 Full Equations (FEQ) Model for the Solution of the Full, Dynamic Equations of Motion for One-dimensional Unsteady Flow in Open Channels and Through Control Structures Delbert D. Franz, Charles S.
