Biller-Andorno, Alexander M. Capron, 2016-05-13 Population genomics research drawing on genetic databases has expanded rapidly with some of this information being combined in biobanks Managing this information in an appropriate way is a highly complex ethical issue in the health policy arena This book combines theoretical and empirical research to analyze the areas of conflict and consensus in the regulatory and ethical frameworks that have been developed to govern biobanks Ethicists from the Department of Ethics Trade Human Rights and Health Law ETH of the World Health Organization the Institute of Biomedical Ethics of Geneva University and the Institute of Biomedical Ethics of the University of Zurich with the support of the Geneva International Academic Network GIAN examine the conditions under which genetic databases can be established kept and made use of in an ethically acceptable way In addition to a comprehensive review of the scientific literature and a comparative analysis of existing normative frameworks they present the results of in depth interviews with experts around the world concerning the most unresolved and controversial issues The results of that study combined with their normative analysis leads to recommendations for a better international framework **Bioethics in Cultural Contexts** Christoph Rehmann-Sutter, Marcus Düwell, Dietmar Mieth, 2006-03-08 CHRISTOPH REHMANN SUTTER MARCUS D WELL DIETMAR MIETH When we placed finitude limits of human existence as a motto over a round of discussion on biomedicine and bioethics which led to this collection of essays we did not know how far this would lead us into methodological

quandaries However we felt intuitively that an interdisciplinary approach including social and cultural sciences would have an advantage over a solely disciplinary philosophical or theological analysis Bioethics if it is to have adequate discriminatory power should include sensitivity to the cultural contexts of biomedicine and also to the cultural contexts of bioethics itself Context awareness of course is not foreign to philosophical or theological bioethics for the simple reason that the issues tackled in the debates as in other fields of ethics could not be adequately understood outside their contexts Moral issues are always accompanied by contexts When we try to unpack them which is necessary to make them accessible to ethical discussion we are regularly confronted with the fact that in removing too much of the context we do not clarify an issue but make it less comprehensible The context at least some essential parts of it is intrinsic to the issue Unpacking in ethics is therefore a different procedure It does not mean peeling the context off but rather identifying which contextual elements are essential for an understanding of the key moral aspects of the issue and explaining how they establish its particular character

This seminal collection of 46 landmark works by Dr Siegler on the topic is organized around five themes of foundational scholarship: restoring and transforming the ethical basis of modern clinical medicine, the doctor-patient relationship, education and professionalism, end-of-life care, and clinical innovation. As bio-capital in the form of medical knowledge, skills, and investments moves with greater frequency from its origin in First World industrialized settings to resource-poor communities with weak or little infrastructure, countries with emerging economies are starting to expand new indigenous science bases of their own. The case studies here from the UK, West Africa, Sri Lanka, Papua New Guinea, Latin America, and elsewhere explore the forms of collaborative knowledge relations in play and the effects of ethics review and legal systems on local communities and also demonstrate how anthropologically informed insights may hope to influence key policy debates. Questions of governance in science and technology, as well as ethical issues related to bio-innovation, are increasingly being featured as topics of complex resourcing and international debate, and this volume is a much-needed resource for interdisciplinary practitioners and specialists in medical anthropology, social theory, corporate ethics, science, and technology studies.
