Background and Introduction to Gattaca

Gattaca is a 1997 American dystopian science fiction film written and directed by Andrew Niccol in his feature directorial debut. The film presents a future society driven by eugenics where children are conceived through genetic selection to ensure they possess the best hereditary traits of their parents. The film centers on Vincent Freeman, played by Hawke, who was conceived outside the eugenics program and struggles to overcome genetic discrimination to realize his dream of going into space.

The film draws on concerns over reproductive technologies that facilitate eugenics, and the possible consequences of such technological developments for society. It also explores the idea of destiny and the ways in which it can and does govern lives. Characters in *Gattaca* continually battle both with society and with themselves to find their place in the world and who they are destined to be according to their genes. The film is noted for its unique use of color. Cinematographer Shawnee Smith employed vibrant gold, green, and electric blue tones throughout the film, and shot the film in Super 16mm format, which adds an enlarged layer of grain.

The film was shot under the working title *The Eighth Day*, a reference to the seven days of creation in the Bible. However, by the time its release was scheduled for the fall of 1997, the Belgian film *Le huitième jour* had already been released in the US under the title *The Eighth Day*. As a result, the film was retitled *Gattaca*, which takes inspiration from the letters G, A, T, and C, derived from four of the nucleobases of DNA: guanine, adenine, thymine and cytosine. The film tanked at the box office and only earned a domestic total of \$32.3 million against a reported budget of \$36 million. It was a 1997 nominee for the Academy Award for Best Art Direction and the Golden Globe Award for Best Original Score. A follow-up series was in development at Showtime, but has been cancelled as of 2003. *Gattaca* currently holds an 82% fresh rating on Rotten Tomatoes with the following critics' consensus: "Intelligent and scientifically provocative, *Gattaca* is an absorbing sci-fi drama that poses important interesting ethical questions about the nature of science." Learning Disability and Inclusion Phobia C. F. Goodey, 2015-10-05 The social position of learning disabled people has shifted rapidly over the last 20 years from long stay institutions first into

community homes and day centres and now to a currently emerging goal of ordinary lives for individuals using person centred support and personal budgets These approaches promise to replace a century and a half of scientific pathological models based on expert assessment and of the accompanying segregated social administration which determined how and where people led their lives and who they were This innovative volume explains how concepts of learning disability intellectual disability and autism first came about describes their more recent evolution in the formal disciplines of psychology and shows the direct relevance of this historical knowledge to present and future policy practice and research Goodey argues that learning disability is not a historically stable category and different people are considered learning disabled as it changes over time Using psychological and anthropological theory he identifies the deeper lying pathology as inclusion phobia in which the tendency of human societies to establish an in group and to assign out groups reaches an extreme point Thus the disability we call intellectual is a concept essential only to an era in which to be human is essentially to be deemed intelligent autonomous and capable of rational choice Interweaving the author's historical scholarship with his practice based experience in the field Learning Disability and Inclusion Phobia challenges myths about the past as well as about present day concepts exposing both the historical continuities and the radical discontinuities in thinking about learning disability
