Current Trends in the Representation of Physical Processes in Weather and Climate Models David A. Randall, J. Srinivasan, Ravi S. Nanjundiah, Parthasarathi Mukhopadhyay, 2019-01-31 This book focuses on the development of physical parameterization over the last 2 to 3 decades and provides a roadmap for its future development. It covers important physical processes: convection, clouds, radiation, land surface, and the orographic effect. The improvement of numerical models for predicting weather and climate at a variety of places and times has progressed globally. However, there are still several challenging areas which need to be addressed with a better understanding of physical processes based on observations and to subsequently be taken into account by means of improved parameterization. And this is all the more important since models are increasingly being used at higher horizontal and vertical resolutions. Encouraging debate on the cloud resolving approach or the hybrid approach with parameterized convection and grid scale cloud microphysics and its impact on models' intrinsic predictability, the book offers a motivating reference guide for all researchers whose work involves physical parameterization problems and numerical models.

Severe Storms Someshwar Das, Wei-Kuo Tao, 2025-01-25 The book provides information on the observational aspects of the severe storms through satellite, radar, aircraft, and ground-based network of stations, and these issues are discussed in the first part of the book consisting of 8 chapters. The numerical modelling and data assimilation techniques are discussed in the second part of the book aimed at development of Early Warning Systems. 12 chapters, and finally the outlook of the severe storms in a changing climate scenario, their socio-economic impacts, and policies for disaster mitigation are discussed in the third part of the book consisting of 6 chapters. This book is of great interest to atmospheric scientists and other researchers, practitioners, policy and decision makers, international institutions, governmental and non-governmental organizations, educators, as well as students.

Chinese Higher Education Reform and Social Justice Bin Wu, W. John Morgan, 2015-06-26 In place of a distributive justice perspective which focuses simply on equal access to universities, this book presents a broader understanding of the relationship between Chinese higher education and economic and social change. The necessity for research on the place of universities in contemporary Chinese society may be seen from current debates about and policy towards issues of educational inequality at Chinese universities. Many questions arise as a consequence: What are the limitations of neo-liberalism in higher education policy and what are the alternatives? How has the Chinese government met the challenges of educational inequality and what lessons may be learned from its recent initiatives? How may higher education enhance social justice in Chinese society given economic, social, and cultural inequality? What may be learned from the experience of Macau, Hong Kong, and of Taiwan in terms of achieving social justice in China?

universities These questions are considered by a group of leading scholars from both inside and outside China
