Remote Sensing of Aquatic Coastal Ecosystem Processes Laurie L. Richardson, Ellsworth F. LeDrew, 2006-06-11 The aquatic coastal zone is one of the most challenging targets for environmental remote sensing Properties such as bottom reflectance spectrally diverse suspended sediments and phytoplankton communities diverse benthic communities and transient events that affect surface reflectance coastal blooms runoff etc all combine to produce an optical complexity not seen in terrestrial or open ocean systems Despite this complexity remote sensing is proving to be an invaluable tool for Case 2 waters This book presents recent advances in coastal remote sensing with an emphasis on applied science and management Case studies of the operational use of remote sensing in ecosystem studies monitoring and interfacing remote sensing science management are presented Spectral signatures of phytoplankton and suspended sediments are discussed in detail with accompanying discussion of why blue water Case 1 algorithms cannot be applied to Case 2 waters Audience This book is targeted for scientists and managers interested in using remote sensing in the study or management of aquatic coastal environments With only limited discussion of optics and theory presented in the book such researchers might benefit from the detailed presentations of aquatic spectral signatures and to operational management issues While not specifically written for remote sensing scientists it will prove to be a useful reference for this community for the current status of aquatic coastal remote sensing
