Playfair McMurrich, 2015-06-17 Excerpt from The Development of the Human Body A Manual of Human Embryology

The increasing interest in human and mammalian embryology which has characterized the last few years has resulted in many additions to our knowledge of these branches of science and has necessitated not a few corrections of ideas formerly held In this fourth edition of this book the attempt has been made to incorporate the results of all important recent contributions upon the topics discussed and at the same time to avoid any considerable increase in the bulk of the volume Several chapters have therefore been almost entirely recast and the subject matter has been thoroughly revised throughout so that it is hoped that the book forms an accurate statement of our present knowledge of the development of the human body To several colleagues the author is indebted for valuable suggestions and in this connection he desires especially to thank Dr J C Watt for much generous assistance in the revision of the manuscript and for undertaking the correction of the proof sheets In addition to the works mentioned in the preface to the first edition as of special value to the student of Embryology mention should be made of the Handbuch der vergleichenden und experimentellen Entwicklungslehre der Wirbeltiere edited by Professor Oscar Hertwig and especially of the Manual of Human Embryology edited by Professors F Keibel and F P Mall About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works [Manual of human embryology v.1, 1910](#) Franz Keibel, 1910 **The Development of the Human Body** James Playfair McMurrich, 2017-12-11 Excerpt from The Development of the Human Body A Manual of Human Embryology Somewhat more than seventy years ago 1839 one of the fundamental principles of biology was established by Schleiden and Schwann as the cell theory According to this all organisms are composed of one or more structural units termed cells each of which in multicellular organisms maintains an individual existence and yet contributes with its fellows to the general existence of the individual Viewed in the light of this theory the human body is a community an aggregate of many individual units each of which leads to a certain extent an independent existence and yet

both contributes to and shares in the general welfare of the community About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
