Specification:

Model	Input Voltage Range	Current		BEC (Output current)	Size	Weight
ESC-28A-P1.1	2-4 Cell Lixx 5-12 Cell NiMH/NiCd Lixx means LI-poly or Li-Ion	28 A continue	40 A burst (10s)	2A: 2Cell Lixx/5-7 Cell NiMH: 5 servo max 3Cell Lixx/8-10 Cell NiMH: 4 servo max 4Cell Lixx/11-12 Cell NiMH: 2 servo max	45x25x11 mm	25g

Wiring Diagram:**Feature Explanation:**

1. **Brake Settings:** brake enabled / brake disabled, default is brake disabled.
2. **Battery Type:** Li-xx(Li-Ion or Li-poly) / Ni-xx(NiMH or NiCd), default is Li-xx.
3. **Low Voltage Protection Mode(Cutoff Mode):** power reducing / power cutoff, default is power reducing.
4. **Low Voltage Protection Threshold(Cutoff Threshold):** low / medium / high, default is medium cutoff voltage.
 - 1) For Li-xx battery: number of battery cells are judged automatically. low / medium / high cutoff voltage for each cell are: 2.5V/2.75V/3.0V. For example: 3 Cell Li-Poly, when medium cutoff voltage is set, the cutoff voltage is: 2.75*3=8.25V.
 - 2) For Ni-xx battery, low / medium / high cutoff voltages are 60%/65%/70% of the startup voltage. For example: 6-cell NiMH battery, fully charged voltage is 1.44*6=8.64V, when low cutoff voltage is set, the cutoff voltage is : 8.64*60%=5.2V.
5. **Startup mode:** normal / soft / super-soft, default is normal startup.
Normal is good for fixed-wing aircraft. Soft / super-soft are good for helicopters. The initial speeds of soft / super-soft mode are pretty slow, 1sec(soft startup) / 2sec(super-soft startup) from startup to full speed. But if throttle is closed (throttle stick moves to bottom) and opened again(throttle stick moves up) within 3 seconds after the first startup, the startup will be in normal mode to get rid of the chances of crash caused by slow throttle response in aerobatic fly.
6. **Timing:** low / medium / high, default is low timing.
In normal cases, low timing can be used for most motors. But for high efficiency, low timing is suggested for 2 pole motor, medium timing is suggested for motor with more than 6 poles. For higher speed, high timing could be used.
Attention: High timing could cause problem with some motors. Please test on ground first!

Designing Electrical Machines with COMSOL Ovidiu CRAIU, 2024-02-29 This book presents the author's experience in modeling electrical machines using numerical Finite Element Method (MEF) models. Each of the studies presented in the book has specific and added complexity. Some of the FEM models were coupled with electric circuit equations; steady state analysis was completed with transient dynamic studies and on occasions mechanical equations were coupled to field circuit formulations. For each of the applications presented, the author provides some insight regarding the more complex parts of the model implementation in COMSOL, what type of solver to use and how to process and interpret the obtained results. Providing some screen shots from COMSOL model implementation may assist the user in developing their own similar applications.

BLDC Motor Drive Simulation and Control Dr. Devendra Potnuru, Electric motors are necessary for all most of all practical systems and becoming integral part in everybody's life of modern living. It is hard to imagine that there are more than 700 million electric motor drive systems of various sizes are operational throughout the world. In the last few years conditions have been changed in adjustable speed drives due to wide spread use of power semiconductor devices with available ratings up to 6000V and 3000A without even connecting series or paralleling the devices. The present competitive development in the solid state devices control systems and signal processing all over the world result in significant progress in performance of AC drives and decreasing the overall drive cost. In order to meet different practical applications various types of motors such as synchronous motors, induction motors, DC motors, switched reluctance motors from several milliwatts to millions of kilowatts. The Permanent Magnet Brushless DC (BLDC) motors have been emerged in wide areas of real world applications due to their higher power density, good dynamic performance and ease of control. Further the motor has high efficiency over a good speed range. In this book simulation of BLDC motor drive and its control is elaborately discussed and is useful for students and faculty members to understand the simulation and control aspect of BLDC motor drive. *IC Master*
