

Construcción de un Aerogenerador

Para quienes desean fabricar este generador con materiales reutilizables, les dejo esta información:

Introducción.

Para los no iniciados es conveniente explicar en un principio que es un aerogenerador.

Sabido es que desde muy antiguo el hombre ha aprovechado la energía del viento, "energía eólica" que está ahora muy de moda. Esta energía se ha aprovechado para muy diversas aplicaciones: para molinos de cereales, mover barcos, sacar agua de pozos, aventar el grano y más modernamente para la producción de energía eléctrica. Esta última aplicación es particularmente útil pues la generación de electricidad se hace a veces muy necesaria en lugares donde no llega la electricidad distribuida por las compañías eléctricas. Además es interesante poseer electricidad sin tener que pagar facturas a nadie por ello, -al menos mientras el uso del aire sea gratis- que no sabemos hasta cuando lo será, o que haya que pedir permiso para usarlo como es el uso del espacio radio-eléctrico o de las aguas públicas.

Esta investigación estudia el diseño y la construcción de un generador eléctrico de corriente continua DC utilizando las nuevas técnicas de simulación por el método de análisis de elementos finitos FEA. Se ha tenido en cuenta que el generador sea compatible con las características de funcionamiento de una turbina eólica de baja potencia. Como objetivo principal se ha planteado el diseño de un generador que opere condicionado por las características de la turbina de viento que el generador y la turbina funcionen en pareja de manera que ambas máquinas trabajen en un punto óptimo de operación principalmente controlando la velocidad de rotación y el torque.

La capacidad de una nación desarrollada se mide en gran parte por la calidad de vida que es capaz de ofrecer a su población el grado de seguridad y cobertura de sus necesidades básicas así como la capacidad de establecer medios para hacer que sea estable y se garantice para un futuro a corto y largo plazo. Cuando se habla de estabilidad se refiere a aquellas acciones que como nación deben ser prioritarias como la dependencia de recursos energéticos con los cuales se realizan las obras y proyectos que a o con a o se dan en la república mexicana y que son parte de la vida de todos los ciudadanos de este gran país. Lamentablemente los agentes que dan un gran apoyo para proyectos de infraestructura en el país recursos como el petróleo y el gas natural son llevados como estandarte de una falsa seguridad nacional de la cual es sabido que de América dependemos fuertemente de energéticos no solamente de los Estados Unidos sino de países alrededor del mundo. Se podrá decir que México se ha globalizado pero de una forma dependiente de tecnologías que son posibles de desarrollar en tierra nacional pero que por ideas políticas deben ocupar siempre un segundo escalón.

en las prioridades del país inclusive por arriba de sus mismos ciudadanos Las empresas energéticas en México la Comisión Federal de Electricidad CFE y Luz y Fuerza del Centro LyFC han observado que una gran parte de su presupuesto se ha consumido en energéticos con los precios globalizados de los combustibles fósiles la inversión que tendrá que estar reflejada en nuevas unidades de generación plantas y mantenimiento después de cada año fiscal se ve consumida en la compra de excedentes de combustible necesarios para el buen funcionamiento de nuestro sistema interconectado nacional SIN Hablar de energías renovables es hablar de actualidad y de una forma nueva de pensamiento No es la utilización como tal sino la conciencia ecológica de utilizar solamente lo necesario para llevar una vida de satisfacciones sin poner en peligro las condiciones de vida de las siguientes generaciones que se preocuparán después por hacer lo mismo **Motores y generadores cc/ca ,2022**
