**Handbook of Inter-Rater Reliability, 4th Edition** Kilem L. Gwet, 2014-09-07 The third edition of this book was very well received by researchers working in many different fields of research The use of that text also gave these researchers the opportunity to raise questions and express additional needs for materials on techniques poorly covered in the literature For example when designing an inter rater reliability study many researchers wanted to know how to determine the optimal number of raters and the optimal number of subjects that should participate in the experiment Also very little space in the literature has been devoted to the notion of intra rater reliability particularly for quantitative measurements The fourth edition of this text

addresses those needs in addition to further refining the presentation of the material already covered in the third edition. Features of the Fourth Edition include New material on sample size calculations for chance corrected agreement coefficients as well as for intraclass correlation coefficients. The researcher will be able to determine the optimal number raters, subjects and trials per subject. The chapter entitled Benchmarking Inter Rater Reliability Coefficients has been entirely rewritten. The introductory chapter has been substantially expanded to explore possible definitions of the notion of inter rater reliability. All chapters have been revised to a large extent to improve their readability.

**Indices as Benchmarks in the Portfolio Management** Andreas Schyra, 2012-12-11 Based on a very extensive literature review, the book delineates the previous scientific and practical applications of indices as benchmarks for single asset classes as stocks, commodities, German governmental bonds and cash, as well as especially for multi asset portfolios. According to the specific influencing factors of the Eurozone, a recommendation of allocating equity portfolios with respect to industrial or regional factors is given by an empirical analysis. As most common and significant benchmark index for the Eurozone, the Dow Jones Euro STOXX 50 is analysed according to index effects. This serves as comparison and consideration of the active anticipations of index membership exchanges and a simple index investment during short and long term periods. Furthermore, a correlation weighted equity index established by different TMI industry indices of the Eurozone is calculated, which serves as benefit for diversification opportunities of two multidimensionally diversified and systematically allocated multi asset portfolios. These portfolios are composed with reference towards the Portfolio Selection Theory by Harry M. Markowitz to test its practical relevance and validity during the challenging years from 2001 and 2010.
