Virtue as Identity Aleksandar Fatic, 2016-07-11

Virtue as Identity offers a study of how virtue is learned and identity acquired through the selection and internalization of values A large part of this process is externally imposed through culture Another perhaps more important part of the process is the result of individual and collective sensibilities The book emphasizes the role of emotions and emotional sensibility in our choice of values The book re affirms traditional morality as the foundation of our individual and collective identities The author argues that emotions as well as rational decisions guide the value choices we make and the ideals of character that we presuppose on a political level as much as they do in our private lives Thus the societies we live in are a reflection of our identities or the identities of the majority This opens up radical questions about the identities of the dissenting minorities the proper concept of a moral or value community and the real reach and value of tolerance in modern democracy

*How We Teach Science* John L. Rudolph, 2019-06-01

A former Wisconsin high school science teacher makes the case that how and why we teach science matters especially now that its legitimacy is under attack Why teach science The answer to that question will determine how it is taught Yet despite the enduring belief in this country that science should be taught there has been no enduring consensus about how or why This is especially true when it comes to teaching scientific process Nearly all of the basic knowledge we have about the world is rock solid The science we teach in high schools in particular laws of motion the structure of the atom cell division DNA replication the universal speed limit of light is accepted as the way nature works Everyone also agrees that students and the public more generally should understand the methods used to gain this knowledge But what exactly is the scientific method Ever since the late 1800s scientists and science educators have grappled with that question Through the years they ve advanced an assortment of strategies ranging from the laboratory method to the five step method to science as inquiry to no method at all How We Teach Science reveals that each strategy was influenced by the intellectual cultural and political circumstances of the time In some eras learning about experimentation

and scientific inquiry was seen to contribute to an individual's intellectual and moral improvement while in others it was viewed as a way to minimize public interference in institutional science John Rudolph shows that how we think about and teach science will either sustain or thwart future innovation and ultimately determine how science is perceived and received by the public
