This book discusses several key theories of corporate capital structure to answer how funding structure shapes an institution's value. In this book, the author emphasizes the microeconomic foundations of capital structure theory. He shows how various microeconomic frameworks such as price and game theories, principal agent model, and mechanism design can be applied to solve the optimal capital structure of a firm. By getting used to optimizing corporate capital structures subject to various constraints via microeconomic frameworks, readers will become capable of investigating how to finance projects in their own setups. Thus, this book not only informs readers of specific knowledge but also provides them with tools to solve new problems that they will face in their future. This book will be a valuable resource for students of corporate finance at the postgraduate or doctoral level and will serve as the material for professional training aimed at practitioners and regulators with technical expertise.
