How to Structurally Design a Concrete Slab Culvert? RC Slab Deck Design Using the FORTRAN-95 Program Andinet Zeleke Bekele, 2020-02-21 Master s Thesis from the year 2013 in the subject Engineering Civil Engineering grade Very Good A Addis Ababa University Addis Ababa University Institute of Technology course Structural Engineering language English

abstract This thesis focuses on the development of a FORTRAN 95 program for the structural design of the superstructure part of a concrete slab culvert FORTRAN 95 is a programming language used in the fields of scientific numerical and engineering fields In this thesis this language has been used to develop the program for the structural design of reinforced concrete slab culvert deck The input data for at grade and at fill slab culverts are saved on a note pad in the external file folder which constitute the material properties geometric features and proposed diameter of reinforcement bars of the slab culvert and its deck in the folder which contains FORTRAN 95 program The output data is written on the note pad in the external folder based on the format assigned for each output in the folder which contains the design results of slab deck thickness and area spacing and length of main distribution and temperature reinforcement bars Besides Edge beam design parallel to the traffic is executed and shown in the output result by the developed program Concrete slab culvert is an important structure used to convey trucks and pedestrian along a road corridor or in one of a range of other situations This structure is highly constructed in highway road projects in Ethiopia In this study a FORTRAN program is developed for the structural design of reinforced concrete slab culvert deck according to the provisions given in AASHTO LRFD Bridge 2005 Edition The developed program is expected to assist the structural designers and users to design the superstructure part of a reinforced concrete slab culvert deck efficiently with great accuracy Both at grade and at fill slab deck thicknesses are computed according to the specification specified in AASHTO LRFD Bridge 2005 Edition The reinforcement bars are also designed based on the requirements specified in the code Within the context of this work the program is developed in four steps The first step is to define and analyze the problem the second step is to develop an optimal solution and designing the program the third step is coding the program and the final step is testing and documenting the program Reinforced and Prestressed Concrete Design to EC2 Eugene Obrien,Andrew Dixon,Emma Sheils,2017-09-01 Concrete is an integral part of twenty first century structural engineering and an understanding of how to analyze and design concrete structures is a vital part of training as a structural engineer With Eurocode legislation increasingly replacing British Standards it s also important to know how this affects the way you can work with concrete Newly revised to Eurocode 2 this second edition retains the original s emphasis on qualitative understanding of the overall behaviour of concrete structures Now expanded with a new chapter dedicated to case studies worked examples and exercise examples it is an even more comprehensive guide to conceptual design analysis and detailed design of concrete structures The book provides civil and structural engineering students with complete coverage of the analysis and design of reinforced and prestressed concrete structures Great emphasis is placed on developing a qualitative understanding of the overall behaviour of structures *Fundamentals of Reinforced Concrete Design* Ernest McCullough,2017-11-24 Excerpt from Fundamentals of Reinforced Concrete Design A Lecture Prepared by Ernest McCullough Chief Engineer Fireproof Construction Bureau Portland Cement Association for the Short Course for Manual Training and Vocational Teachers Held at Lewis Institute Chicago June 26 to July 1 1916 This

lecture is not intended to completely cover the subject of reinforced concrete design. It is merely an introduction to the subject. The following books are recommended as texts. Reinforced Concrete Design Svetlana Brzev, John Pao, 2012-10-23. Reinforced Concrete Design: A Practical Approach, 2E, is the only Canadian textbook which covers the design of reinforced concrete structural members in accordance with the CSA Standard A23.3-04 Design of Concrete Structures, including its 2005, 2007, and 2009 amendments, and the National Building Code of Canada 2010. Reinforced Concrete Design: A Practical Approach covers key topics for curriculum of undergraduate reinforced concrete design courses and it is a useful learning resource for the students and a practical reference for design engineers. Since its original release in 2005, the book has been well received by readers from Canadian universities, colleges, and design offices. The authors have been commended for a simple and practical approach to the subject by students and course instructors. The book contains numerous design examples solved in a step-by-step format. The second edition is going to be available exclusively in hard cover version and colours have been used to embellish the content and illustrations. This edition contains a new chapter on the design of two-way slabs and numerous revisions of the original manuscript. Design of two-way slabs is a challenging topic for engineering students and young engineers. The authors have made an effort to give a practical design perspective to this topic and have focused on analysis and design approaches that are widely used in structural engineering practice. The topics include design of two-way slabs for flexure, shear, and deflection control. Comprehensive revisions were made to Chapter 4 to reflect the changes contained in the 2009 amendment to CSA A23.3-04. Chapters 6 and 7 have been revised to correct an oversight related to the transverse reinforcement spacing requirements in the previous edition of the book. Chapter 8 includes a new design example on slender columns and a few additional problems. Several errors and omissions, both text and illustrations, have also been corrected. More than 300 pages of the original book have been revised in this edition. Several supplements are included on the book web site. Readers will get time-limited access to the new column design software, BPA COLUMN, which can generate column interaction diagrams for rectangular and circular columns of variable dimensions and reinforcement amount. Additional supplements include spreadsheets related to foundation design and column load take-down, and a few Power Point presentations showcasing reinforced concrete structures under construction and in completed form. Instructors will have an access to additional web site which contains electronic version of the Instructor's Solution Manual with complete solutions to the end-of-chapter problems and Power

Point presentations containing all illustrations from the book The book is a collaborative effort between an academic and a practising engineer and reflects their unique perspectives on the subject Svetlana Brzev Ph D P Eng is a faculty at the Civil Engineering Department of the British Columbia Institute of Technology Burnaby BC She has over 25 years of combined teaching research and consulting experience related to structural design and rehabilitation of concrete and masonry structures including buildings municipal and industrial facilities John Pao MEng PEng Struct Eng is the President of Bogdonov Pao Associates Ltd of Vancouver BC and BPA Group of Companies with offices in Seattle and Los Angeles Mr Pao has extensive consulting experience related to design of reinforced concrete buildings including high rise residential and office buildings shopping centers parking garages and institutional buildings **Reinforced Concrete Design** Leonard Spiegel, George F.
