

was odd, but this seemed to be the daily pattern. Almost without change I ask my kids on the way home about homework with my eighth grade son more often having no homework, while my sixth grade daughter usually has one-two hours every night. I find it highly odd as a parent and a new teacher that one child has so much homework and is barely passing her classes, while the other has relatively no homework and earns all B's and A's.

Based upon this odd phenomenon, I decided to research the task of homework. My reasoning was I hoped to discover why this is occurring occurs and why homework seemed to be so unbalanced between the grades. Being primarily a high school substitute teacher, I thought I would begin at the high school level for this research project and if the opportunity arises, perhaps in the future, expand my research into the middle and possibly the elementary school grade levels.

After deep consideration and limited access to high school students, I decided on a series of questionnaires to give dimension to my results: high school students ninth through twelfth grades), high school teachers, and the corresponding parents of those students. The questionnaires would be slightly different from the other. My thoughts include an attempt to find the differing perspectives of the three subject groups as to their points of view of homework, what forms of homework may be more beneficial for the student, and what are the expectations are as to the participation of each in the homework process. Should parents help or not with homework, do teachers need to review (grade) and follow up with each student (if so, how) and what expectations do teachers and parents have for their student/child to complete the homework?
