By Joanie Sampayrac, John Palmer,  
and Richard A. Turpin

**A**ccording to the U.S. Census, almost 50 million Americans over the age of 5 have at least one disability—that is nearly one out of every five Americans. Over 33 million of those are working-age men or women. Furthermore, an estimated 35 million people are considered severely disabled, and of those between the ages of 21 and 64, about 46% remain employed, according to author Timothy Moore ([ezinearticles.com/?How-Many-Disabled-Americans-Are-There?&id=1918829](http://ezinearticles.com/?How-Many-Disabled-Americans-Are-There?&id=1918829)). Recent decades have seen significant legislation to ensure that those workers have access—access to public buildings, access to employment, and access to justice. One of the most important pieces of legislation that has attempted to enable such access is the Americans with Disabilities Act (ADA) of 1990.

In the years following enactment of the ADA, the literature was rife with doom and gloom over how costly this law was going to be for businesses in general. Articles geared to employers in the accounting profession warned firms that compliance with the ADA could be complicated and expensive, advised them to review job descriptions and personnel policies, and suggested ways to improve facilities to avoid lawsuits for noncompliance with the ADA. These articles show that accounting firms were wringing their hands over the impending flood of litigation that was going to follow if they did not get their houses in order.

## The ADA Reality

Twenty-one years after President George H.W. Bush signed the ADA into law, this legislation appears to have changed how society accommodates individuals with disabilities. Public buildings regularly have wheelchair ramps and parking spaces, vir-

tually all curbs at intersections allow for wheelchair users, many elevators have Braille number buttons and audio cues, and office design companies offer plans that accommodate a wide range of disabilities. Studies show that employer efforts to comply with the ADA have generally been simple and inexpensive in most cases. A study funded by the U.S. Department of Labor and undertaken by the Job Accommodation Network found that in the 1990s, the typical cost of an accommodation for a qualifying disability under the ADA was less than \$500 ("What Is the Real Cost of ADA Compliance," by Dan Woog, [\[ance\]\(http://people.monster.com/news/articles/1073-what-is-the-real-cost-of-ada-compliance\)\). Moreover, the necessary accommodations were often quite easy: raising or lowering a desk, installing a ramp, allowing orthopedic shoes in modification of the company dress code, allowing a flexible schedule, increasing volume on a telephone receiver, installing a large-screen computer monitor, or using an ergonomic chair with extra padding.](http://people.monster.com/news/articles/1073-what-is-the-real-cost-of-ada-compli-</a></p></div><div data-bbox=)

There are several reasons why companies, especially accounting firms, should make efforts to recruit and retain capable workers with qualifying disabilities and make reasonable accommodations for them. This article discusses those reasons. Among the many benefits of hiring the disabled are tax incentives, increasing diver-

The Encyclopedia of Housing, Second Edition Andrew T. *Insufficient Funds* Rebecca M. Blank, Michael S. Barr, 2009-03-26 One in four American adults doesn't have a bank account Low income families lack access to many of the basic financial services middle class families take for granted and are particularly susceptible to financial emergencies unemployment loss of a home and uninsured medical problems Insufficient Funds explores how institutional constraints and individual decisions combine to produce this striking disparity and recommends policies to help alleviate the problem Mainstream financial services are both less available and more expensive for low income households High fees minimum balance policies and the relative scarcity of banks in poor neighborhoods are key factors Michael Barr reports the results of an in depth study of financial behavior in 1 000 low and moderate income families in metropolitan Detroit He finds that most poor households have bank accounts but combine use of

mainstream services with alternative options such as money orders pawnshops and payday lenders Barr suggests that a tax credit for banks serving primarily disadvantaged customers could facilitate greater equality in the private financial sector Drawing on evidence from behavioral economics Sendhil Mullainathan and Eldar Shafir show that low income individuals exhibit many of the same patterns and weaknesses in financial decision making as middle class individuals and could benefit from many of the same financial aids They argue that savings programs that automatically enroll participants and require them to actively opt out in order to leave the program could drastically increase savings ability Ronald Mann demonstrates that significant changes in the credit market over the past fifteen years have allowed companies to expand credit to a larger share of low income families Mann calls for regulations on credit card companies that would require greater disclosure of actual interest rates and fees Raphael Bostic and Kwan Lee find that while home ownership has risen dramatically over the past twenty years elevated risks for low income families such as foreclosure may well outweigh the benefits of owning a home The authors ultimately argue that if we want to demand financial responsibility from low income households we have an obligation to assure that these families have access to the banking credit and savings institutions that are readily available to higher income families Insufficient Funds highlights where and how access is blocked and shows how government policy and individual decisions could combine to eliminate many of these barriers in the future

*Fundamental Principles of EU Law Against Money Laundering* Emmanuel Ioannides, 2016-04-22 This book critically analyses fundamental principles of EU law for the control of international economic crime. Discussing how the reporting system and the exchange of information are at the heart of the global anti money laundering regime, the study also looks at the inferential force of financial intelligence in criminal proceedings and the responsibilities this places on prosecutors and criminals alike. The author closely examines the application of Article 8 2 of the European Court of Human Rights for the retention and movement of the fingerprints, cellular samples and DNA profiles of unconvicted persons and argues the incompatibility with the ECHR along with the effect of socially stigmatising unconvicted persons. The work concludes with exploring how financial regulation has inter alia shifted responsibility to businesses and financial institutions to become more transparent and accountable to financial regulators and tax authorities. This critical analysis is essential reading for law students and the Judicial Body as well as financial crime investigators and regulators.

### **Groundwater Resources**

**Modelling** M. G. Shepley, 2012 The UK is a country with over 150 years of widespread exploitation of its principal aquifers for public water supply. Increasing demands, greater awareness of environmental pressures and more exacting legislation has heightened the need for quantitative models to predict the impacts of groundwater use. In the UK this has culminated in a unique national regulator led programme for England and Wales to develop conceptual and numerical models of the principal bedrock aquifers. The outcomes of this programme will be of interest to the international hydrogeological community particularly as international legislation such as the European Water Framework Directive requires management of water issues across administrative boundaries with a varied cast of stakeholders. The collection of papers provides a contrast between practitioner and research based approaches to assess and predict the anthropogenic impacts and environmental pressures.

**Transnational Financial Regulation after the Crisis** Tony Porter, 2014-02-05 The global financial crisis that began in 2007 was the most destructive since the 1930s. The rapid spread of the crisis across borders and the complexity of these cross border linkages highlighted the importance for authorities of working together in responding to the crisis. This book examines the transnational response that relied heavily on a set of relatively informal transnational regulatory groupings that had been constructed over previous decades. During the crisis these arrangements were made stronger and more inclusive but they remain very complex. Thousands of pages of new rules have been created by various transnational bodies and the implementation of these rules relies heavily on domestic law and regulation and private rules and practices. This book analyses this complex response showing that its overly technical and incremental character, the persistence of tensions between transnational processes and state centred politics and the ongoing power of private actors have made the regulatory response fall short of what is needed. *Transnational Financial Regulation after the Crisis* provides new insights that are relevant for theory and practice not only for transnational financial regulation but for global governance more
