advanced undergraduate level and many others. Manned and unmanned ground, aerial, and marine vehicles enable many promising and revolutionary civilian and military applications that will change our life in the near future. These applications include but are not limited to surveillance, search and rescue, environment monitoring, infrastructure monitoring, self-driving cars, contactless last-mile delivery vehicles, autonomous ships, precision agriculture, and transmission line inspection, to name just a few. These vehicles will benefit from advances of deep learning as a subfield of machine learning able to endow these vehicles with different capability such as perception, situation awareness, planning, and intelligent control. Deep learning models also have the ability to generate actionable insights into the complex structures of large data sets. In recent years, deep learning research has received an increasing amount of attention from researchers in academia, government laboratories, and industry. These research activities have borne some fruit in tackling some of the challenging problems of manned and unmanned ground, aerial, and marine vehicles that are still open. Moreover, deep learning methods have been recently actively developed in other areas of machine learning, including reinforcement training and transfer meta-learning, whereas standard deep learning methods such as recent neural network, RNN, and coevolutionary neural networks, CNN. The book is primarily meant for researchers from academia and industry who are working on in the research areas such as engineering, control engineering, robotics, mechatronics, biomedical engineering, mechanical engineering, and computer science. The book chapters deal with the recent research problems in the areas of reinforcement learning-based control of UAVs and deep learning for unmanned aerial systems, UAS. Gender Inequality and the Potential for Change in Technology Fields Bernhardt, Sonja, Braun, Patrice, Thomason, Jane, 2018-11-09. Over the last few decades, the refrain for many activists in technology fields around the globe has been attraction, promotion, and retention.
