

WRITING SCIENTIFIC RESEARCH PAPERS

I. What is a Research Paper?

There are two kinds of research papers. Primary or experimental research papers describe an experiment performed by the author. (I mean "experiment" in the broadest sense, as in a scientific investigation. The investigation may employ a rigorously controlled lab experiment, a controlled field experiment, a theoretical/mathematical investigation, or simply some new scientific observations. The key is that the body of the paper is about a novel investigation conducted by the author.) Secondary or review research papers summarize the research that has been done in a particular area. Reviews generally do not introduce much new information or new results, but rather synthesize a larger body of work, providing a new perspective on a field or question. In this class, you will be required to write a scientific review paper.

A secondary research paper or review paper is not a 'book report' or an annotated list of experiments in a particular field, but demands a considerable, complete literature review. However, beyond just reporting the results and conclusions of other studies, the review must integrate, interpret and expand these conclusions. Often, articles must be read over and over again to really understand the subtle relevance of a particular result or conclusion. Then, the independent conclusions of separate investigations must be combined into a cohesive presentation. They must be contrasted and compared; are there conflicting conclusions? Can apparent conflicts be resolved through a new outlook or interpretation? Review papers often take historical perspectives, describing how a field (and the major questions in that field) changed as more information was accumulated. Or, review papers may focus on 'the state of the art' in a particular field; interpreting divergent results and suggesting an appropriate avenue for future research.

Who writes review articles? Usually, it is the experts in a particular field. They have the experience and knowledge to critically evaluate experiments and organize them in a new provocative way; perhaps incorporating them into a new, unifying theory. Good review papers are not easy to write; if they were, more scientists would write them. By writing your review paper, I expect you to become a 'departmental expert' on a topic, able to 'wow' your fellow AP biology students with your new knowledge about your field. I do expect to see a creative synthesis of the literature, rather than a jumbled regurgitation of facts.

Narratives of Qualitative Research Josh Tenenbergs,2024-05-21 Narratives of Qualitative Research uses a novel form of writing about how to do qualitative research called a praxis narrative Each narrative is told from the author s perspective in carrying out one of his past research studies in the social sciences Told chronologically and in a first person voice the narratives position the reader alongside the narrator so as to vicariously experience how research happens in its situated particulars Rather than a set of idealizations and universalized pronouncements the author reveals what really goes on when one is in the thick of complex and challenging research studies the points of trouble along with the successes This will be relevant to researchers who have already undertaken one or more empirical research studies though not necessarily using qualitative approaches and now find themselves facing something new a new analytic method a new theoretical lens a new form of data collection a new domain of research questions a new rhetorical approach This requires letting go of the secure handholds of prescribed methods and

responding to the contingencies that arise in the midst of the research The reader is invited to follow along as the author makes visible his praxis of qualitative research Unlike more conventional texts in this unique alternative the reader can follow the author's journey through his research studies as a way to reorient their conception of qualitative research and their own praxis of it This is fascinating reading for qualitative researchers and students taking qualitative research courses across the social sciences education and behavioural sciences
