**Advances in Harvest and Post-Harvest Technology of Fishes** D.D. Nambudiri, 2012-01-15 In recent years there have been notable advances in the fisheries. Progresses made in refinements of vessels, new line materials and line handling systems preserving the catch, the availability of oceanographic sensor equipments and the utilization of satellite technology to locate potential fishing grounds have greatly improved the fishing power of longline vessels. Post harvest technology of fish has evolved in the last one decade to a more energy efficient, cost effective and quality upgrading technology. Since fresh fish can get spoiled very quickly, the development of technology for post harvest preservation and methodology to convert fish to value added products have also become popular in recent times. Value addition helps in getting high price for the fishery products. There is a need to develop competent human resources in the field of post harvest management of fish and production of value added products from them. It is required to inculcate vocational and entrepreneurial skills in order to widen employment opportunities particularly among rural youth and the disadvantaged sections of the society as well as to enable self employment.
