Manual para el análisis de aguas residuales Tatiana Rodríguez Chaparro, Karol Lucía Fuentes Escobar, Alan Josué Álvarez Pulido, Víctor Manuel Poveda Gómez, 2023-03-01 Los objetivos de desarrollo sostenible 3 Salud y Bienestar y 6 Agua Limpia y Saneamiento han mostrado la necesidad de las comunidades de tener un buen manejo y control de las aguas potables y residuales Estas son algunas de las metas m s importantes de los gobiernos porque permiten mejorar la calidad de vida de las personas reducir la brecha de la desigualdad promover las buenas pr cticas en salud p blica con el objetivo de reducir la presencia de enfermedades transmitidas por aguas contaminadas A pesar de que el conocimiento en las tecnolog as para tratamiento de las aguas residuales ha crecido notablemente el avance en el aprendizaje de las t cnicas anal ticas

necesita comprenderse mejor para evaluar el correcto funcionamiento de los procesos que involucra una planta de tratamiento de agua. En este sentido, este libro es un apoyo para la docencia e investigación ya que recopila y documenta el trabajo realizado durante más de diez años en el Laboratorio de Saneamiento Ambiental de la UMNG en torno al estudio de métodos analíticos para monitorear y evaluar el desempeño de diferentes tecnologías basadas en procesos biológicos para tratamiento de aguas. Este manual está dirigido a los estudiantes de pregrado y posgrado técnicos de laboratorio, profesores investigadores que trabajen en su rutina con temáticas afines al saneamiento ambiental como el monitoreo de aguas residuales cuando estas son tratadas por procesos biológicos.

Manual de zooplankton : Ávila Parga, Guery, Dueñas Ramírez, Pedro Ricardo, Sánchez García, Reyes, Villatoro Fraile, Miguel, 2022-02-28. Este manual surge como una estrategia de aprovechamiento del material obtenido durante los muestreos zooplanctónicos realizados con estudiantes de Biología Marina en la Ensenada de Gaira región de Santa Marta en el Caribe colombiano y la conveniencia de contar con un registro de algunas de las especies componentes del zooplankton presente en esas aguas, registro que facilitará en particular a los estudiantes de la región y en general a los investigadores interesados el conocimiento de las especies zooplanctónicas locales. En atención a la biodiversidad encontrada en las muestras y al no poder trabajar en todos los grupos presentes se hizo una selección que tuviera en cuenta que los organismos escogidos representaran a los grupos más desconocidos en la zona de muestreo y sus alrededores. Esperamos que este manual se considere el inicio de una serie y sea un incentivo para que investigadores y amantes de estos organismos realicen un atlas de zooplankton del Caribe y Pacífico de Colombia.

Mars analogs: Environment, Habitability and Biodiversity Yiliang Li, André Antunes, Maggie CY Lau Vetter, David Flannery, 2023-06-15. Martian surface contains diverse lithologies from sedimentary rocks to mafic ultramafic igneous rocks and ground patterns. These rocks record the late stage evolution on the Martian surface from a temperate environment with bodies of liquid water to the current cold and hyper arid environment. The constraints on the key parameters and processes for water-rock interaction, sedimentation of materials and geomorphological development can provide important insights into the environmental change and habitability on the Martian surface. However, due to the difficulty in accessing Martian samples and limited remote sensing data available from the Martian surface, most of the mysteries on Mars remain unraveled. In this proposed research topic, we will focus on geological settings on Earth that are similar to the conditions on Mars. These Mars analogs are employed to infer possible processes on Mars and their impact on habitability and the search for life. The Mars analogs on Earth span a variety of environments such as the super arid sedimentary plains e.g. the Qaidam Basin in the north of the Tibetan Plateau, the Mojave Basin in the USA and the Atacama Desert in South America, the subsurface fracture waters in Precambrian cratons e.g. the Canadian Shield, the Fennoscandian Shield and the Kaapvaal Craton, high salinity localities e.g. Laguna de Terez salt mines and deep sea brines as well as extremely cold and highly radiative environments e.g. polar regions, thin atmosphere. These settings on Earth are more accessible for collecting high quality mineralogical, geochemical

geochronological and microbiological data by the state of the art facilities These data can provide a solid cornerstone for us to understand the cycles of water and other life essential elements and their impact on habitability and biodiversity in extreme environments on Earth as well as the limits of life and the detection of biosignatures Such research can also provide vital insights on the search for life on other planets and moons
