Fundamental Aspects of Quantum Theory Vittorio Gorini, Alberto Frigerio, 2012-12-06 This book collects the contributions to the NATO Advanced Research Workshop on Fundamental Aspects of Quantum Theory held at the Centro di Cultura Scientifica Alessandro Volta Villa Olma Carro Italy 2-7 September 1985. The meeting was dedicated to the memory of the late professor Piero Caldirola, a prominent member of the Physics Department of the University of Milan and a native of Como. The aim of the workshop has been to present several recent experimental results and theoretical developments concerning the various facets of quantum physics. The breadth of scope of the meeting was in accordance with Professor Caldirola's vast scientific interests and fostered communication among experimental physicists, theoretical and mathematical physicists, and mathematicians working in different but related fields. Indeed, lecturers endeavoured to make their contributions understandable to people acquainted with the problem but not necessarily familiar with the technical details, and these efforts were successful as indicated by the frequent private discussions which took place among participants belonging to different breeds and brands. The meeting was made up of six one-day sessions, each of them addressing to a specific aspect of quantum theory: 1. General Problems and Crucial Experiments with emphasis on single particle interference experiments of neutrons and of photons and on the measurement problem; 2. Quantization and Stochastic Processes including stochastic quantization of gauge fields, stochastic description of supersymmetric fields, quantum stochastic calculus and stochastic mechanics.
