"An Insect View of Its Plain" Rosemary Scanlon

McTier,2013-01-30 During the nineteenth century insects became a very fashionable subject of study and the writing of the day reflected this popularity However despite an increased contemporary interest in ecocriticism and cultural entomology scholars have largely ignored the presence of insects in nineteenth century literature This volume addresses that critical gap by exploring the cultural and literary position of insects in the work of Henry David Thoreau Emily Dickinson and John Muir It examines the beliefs these authors share about the nature of our connection to insects and what insects have to teach about creation and our place in it An important contribution to both ecocriticism and literary entomology this work contributes much to the understanding of Thoreau Dickinson and Muir as nature writers natural scientists entomologists and botanists and their intimate and highly spiritual relationships with nature **It Happened in Wisconsin** Michael

The Renin-Angiotensin System and the Kidney

Xiao C. Li, Jia L. Zhuo, 2015-03-01 The renin angiotensin system RAS is one of the most important endocrine tissue to tissue paracrine cell to cell and intracrine intracellular nuclear humoral systems in the regulation of blood pressure cardiovascular and kidney function in health and disease The RAS has remarkably evolved from the initial discovery of the rate limiting enzyme renin to a complex biochemical and physiological cascade involving more than a dozen members Currently there are up to five axes or pathways identified in the RAS each has its substrate enzyme effector peptide receptor and downstream signaling pathways These include the renin ACE ANG II AT1 receptor the APA ANG III AT2 receptor the ACE2 ANG 1 7 Mas receptor the prorenin prorenin receptor PRR and the ANG IV AT4 receptor IRAP pathways Accordingly the roles of the RAS have expanded well beyond the classic endocrine paradigm as a powerful vasoconstrictor a potent aldosterone stimulator or a sodium retaining hormonal system The goals of this article are to review and discuss the current insights into and new perspectives on the expression localization and novel actions of the RAS with a focus in the kidney Special emphasis will be placed on recently discovered new members of the RAS derived from studies using innovative mutant rats or mice that either overexpress knockin or are deficient knockout of a particular substrate enzyme ANG peptide or receptor This new knowledge will help improve our understanding how each of these pathways act directly or indirectly to regulate blood pressure cardiovascular and kidney function in physiology and can be targeted to treat hypertension cardiovascular and renal diseases
