

LOGISTICS and ADMINISTRATIVE END of MISSION REPORT in EMERGENCIES

MISSION: _____

Date: _____

FROM:

Administrator:

- Name, position, contacts, mission timeframe

Logistician:

- Name, position, contacts, mission timeframe

TO:

Desk officer:

Mission coordination team:

NB: Reports in general should be as short as possible whilst ensuring all important information is recorded.

This format can be used for either a hand-over report or an end-of mission report.

The 1st objective of the report is to provide an overview of how logistics and administration are arranged in the programme or field location, what are the key responsibilities and how things are managed.

The 2nd objective is also to clearly identify what are the current problems and the pending things to be implemented.

For each chapter think about what has been already done, what are the next objectives and which opportunities/problems you identified?

Sample Return Missions Andrea Longobardo, 2021-05-10 **Sample Return Missions The Last Frontier of Solar System Exploration** examines the discoveries and results obtained from sample return missions of the past present and future It analyses the results in the context of the current state of knowledge and their relation to the formation and evolution of planetary bodies as well as to the available technologies and techniques It provides detailed descriptions of experimental procedures applied to returned samples Beginning with an overview of previous missions **Sample Return Missions** then goes on to provide an overview of facilities throughout the world used to analyze the returned samples Finally it addresses techniques for collection transport and analysis of the samples with an additional focus on lessons learned and future perspectives Providing an in depth examination of a variety of missions with both scientific and engineering implications this book is an important resource for the planetary science community as well as the experimentalist and engineering communities Presents sample return results obtained so far in relation to remote sensing measurements methods and techniques for laboratory analysis and technology Provides an overview of a variety of sample return missions from Apollo to Hayabusa 2 to future missions Examines technological and methodological advances in analyzing returned samples as well as the resources available globally

Assessment of Planetary Protection Requirements for Mars Sample Return Missions National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Review of Planetary Protection Requirements for Mars Sample Return Missions, 2009-06-06 NASA maintains a planetary protection policy to avoid the forward biological contamination of other worlds by terrestrial organisms and back biological contamination of Earth from the return of extraterrestrial materials by spaceflight missions Forward contamination issues related to Mars missions were addressed in a 2006 National Research Council NRC book Preventing the Forward Contamination of Mars However it has been more than 10 years since back contamination issues were last examined Driven by a renewed interest in Mars sample return missions this book reviews updates and replaces the planetary protection conclusions and recommendations contained in the NRC's 1997 report Mars Sample Return Issues and Recommendations The specific issues addressed in this book include the following The potential for living entities to be included in samples returned from Mars Scientific investigations that should be conducted to reduce uncertainty in the above assessment The potential for large scale effects on Earth's environment by any returned entity released to the environment Criteria for intentional sample release taking note of current and anticipated regulatory frameworks and The status of technological measures that could be taken on a mission to prevent the inadvertent release of a returned sample into Earth's biosphere

Assessment of the Report of NASA's Planetary Protection Independent Review Board National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Space Studies Board, Committee to Review the Report of the NASA Planetary Protection Independent Review Board, 2020-10-19 The goal of planetary protection is to control

to the degree possible the biological cross contamination of planetary bodies Guidelines developed by the Committee on Space Research COSPAR are used by all spacefaring nations to guide their preparations for encounters with solar system bodies NASA s Science Mission Directorate has convened the Planetary Protection Independent Review Board PPIRB to consider updating the COSPAR guidelines given the growing interest from commercial and private groups in exploration and utilization of Mars and other bodies in space At the request of NASA this publication reviews the findings of the PPIRB and comments on their consistency with the recommendations of the recent National Academies report Review and Assessment of the Planetary Protection Policy Development Processes

Assessment of Mars Science and Mission Priorities

National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Committee on Planetary and Lunar Exploration,2003-07-08 Within the Office of Space Science of the National Aeronautics and Space Administration NASA special importance is attached to exploration of the planet Mars because it is the most like Earth of the planets in the solar system and the place where the first detection of extraterrestrial life seems most likely to be made The failures in 1999 of two NASA missions Mars Climate Orbiter and Mars Polar Lander caused the space agency s program of Mars exploration to be systematically rethought both technologically and scientifically A new Mars Exploration Program plan summarized in Appendix A was announced in October 2000 The Committee on Planetary and Lunar Exploration COMPLEX a standing committee of the Space Studies Board of the National Research Council was asked to examine the scientific content of this new program This goals of this report are the following Review the state of knowledge of the planet Mars with special emphasis on findings of the most recent Mars missions and related research activities Review the most important Mars research opportunities in the immediate future Review scientific priorities for the exploration of Mars identified by COMPLEX and other scientific advisory groups and their motivation and consider the degree to which recent discoveries suggest a reordering of priorities and Assess the congruence between NASA s evolving Mars Exploration Program plan and these recommended priorities and suggest any adjustments that might be warranted

Planetary Protection Classification of Sample Return Missions from the Martian Moons European Science Foundation,European Space Sciences Committee,National Academies of Sciences, Engineering, and Medicine,Division on Engineering and Physical Sciences,Space Studies Board,Committee on Planetary Protection Requirements for Sample Return Missions from Martian Moons,2019-06-20 An international consensus policy to prevent the biological cross contamination of planetary bodies exists and is maintained by the Committee on Space Research COSPAR of the International Council for Science which is consultative to the United Nations Committee on the Peaceful Uses of Outer Space Currently COSPAR s planetary protection policy does not specify the status of sample return missions from Phobos or Deimos the moons of Mars

Although the moons themselves are not considered potential habitats for life or of intrinsic relevance to prebiotic chemical evolution recent studies indicate that a significant amount of material recently ejected from Mars could be present on the surface of Phobos and to a lesser extent Deimos This report reviews recent theoretical experimental and modeling research on the environments and physical conditions encountered by Mars ejecta during certain processes It recommends whether missions returning samples from Phobos and or Deimos should be classified as restricted or unrestricted Earth return in the framework of the planetary protection policy maintained by COSPAR This report also considers the specific ways the classification of sample return from Deimos is a different case than sample return from Phobos
