State of the Art Tutorial on Diagnostics in Low Temperature Fuel Cells A. Weber, T. Zawodzinski, V. Ramani, F. Buchi, D. Myers, K. Shinohara, 2015-12-28 **The Chemistry of the Non-Metals** P. Powell, 2013-06-29 This book is a new attempt to interrelate the chemistry of the non metals In the early chapters simple compounds of the non metals with the halogens hydrogen and oxygen are surveyed permitting a large area of chemistry to be discussed without the burden of too many facts The structural relationships in the elemental forms of the non metals are then used as an introduction to the catenated compounds including the boron hydrides In the concluding chapter selected heteronuclear chain ring and cage compounds are considered In some chapters we have thought it useful to outline important features of a topic in relation to chemical theory before giving a more detailed account of the chemistry of individual elements The book is certainly not comprehensive and the bias in the material selected probably reflects our interest in volatile covalent non metal compounds Suggestions for further reading are presented in two ways A selected bibliography lists general textbooks which relate to much of our subject matter References in the text point to review articles and to a few original papers which we consider to be of special interest Although there are few difficult concepts in the text the treatment may be appreciated most by students with some previous exposure to a Group by Group approach to non metal chemistry We have assumed an elementary knowledge of chemical periodicity bonding theory thermodynamics and spectroscopic methods of structure determination
