Spacetime, Geometry and Gravitation Pankaj Sharan,2009-11-18 This is an introductory book on the general theory of
relativity based partly on lectures given to students of M Sc Physics at my university The book is divided into three parts The
rst part is a preliminary course on general relativity with minimum preparation The second part builds the mathematical
background and the third part deals with topics where mathematics developed in the second part is needed The rst chapter
gives a general background and introduction This is followed by an introduction to curvature through Gauss Theorema
Egregium This theorem expresses the curvature of a two dimensional surface in terms of intrinsic quantities related to the
infinitesimal distance function on the surface The student is introduced to the metric tensor Christoffel symbols and Riemann curvature
tensor by elementary methods in the familiar and visualizable case of two dimensions This early introduction to geometric
quantities equips a student to learn simpler topics in general relativity like the Newtonian limit red shift the Schwarzschild
solution precession of the perihelion and bending of light in a gravitational field Part II chapters 5 to 10 is an introduction to
Riemannian geometry as required by general relativity This is done from the beginning starting with vectors and tensors I
believe that students of physics grasp physical concepts better if they are not shaky about the mathematics involved **New**

Computational Geometry Renhong Wang,2003 Computational geometry is a borderline subject related to pure and
applied mathematics computer science and engineering The book contains articles on various topics in computational
geometry based on invited lectures and contributed papers presented during the program on computational geometry at the
Morningside Center of Mathematics at the Chinese Academy of Sciences Beijing The opening article by R H Wang gives a
nice survey of various aspects of computational geometry many of which are discussed in detail in the volume Topics of the
other articles include problems of optimal triangulation splines data interpolation problems of curve and surface design
problems of shape control quantum teleportation and more The book is suitable for graduate students and researchers
