

ECOLOGY: The Study of the Place We Live

Ecology examines the relationships between the living and non-living at scales ranging from the individual organism to the biosphere.

Biodiversity

A diverse range of life indicates ecological health and often drives ecological studies.

Species Interactions

Types of interactions include predation, mutualism, parasitism, commensalism, and competition.

Energy Flow

Energy from the sun is transformed and moves through the ecosystem in a process illustrated by the food web.

Succession

Over time, an ecosystem experiences changes in biodiversity and nutrient availability.

Human Impact

Through construction, agriculture, and pollution, humans make a significant impact on the ecosystem. Modern ecologists focus on measuring this impact.

Guidelines on the Implementation of Nature-based Solutions (NbS) to Combat the Negative Impact of Climate Change on Forestry Food and Agriculture Organization of the United Nations,2023-09-12 Climate change is one of the most critical social and environmental concerns and the biggest threat to economic stability in human history T rkiye Azerbaijan and Central Asia countries namely Kazakhstan Kyrgyzstan Tajikistan Turkmenistan and Uzbekistan are vulnerable to the negative impacts of climate change Although average forest cover is only 10.2 percent of these countries FAO SEC countries they play an essential role in climate change mitigation and adaptation including human well being and biodiversity co benefits The NbS concept has gained attention since the late 2000s Its practical contribution to global climate change mitigation and adaptation efforts has found significant implementation opportunities in forestry to support the protection and conservation restoration and expansion and sustainable management of forests under the impact of climate change Globally implementing NbSs to combat the negative impact of climate change on forestry is promoted by the United Nations Forum on Forests UNFF United Nations Framework Convention on Climate Change UNFCCC the Paris Agreement United Nations Convention to Combat Desertification UNCCD Convention on Biological Diversity CBD The United Nations Human Settlements Programme UN Habitat and the 2030 Agenda for Sustainable Development Regionally implementing NbSs to combat the negative impacts of climate change on forestry has been included in the forest policy initiatives of the countries in the sub region recently As a result governments have implemented NbSs through national strategies and programs to address societal challenges by enhancing ecosystem services and promoting human well being and biodiversity co benefits For example Azerbaijan has implemented afforestation reforestation rehabilitation and restoration activities in forest fund lands on an average of 9 727 hectares ha annually since

2000 Kazakhstan aims to save the Aral Sea basin from salinity and improve soil fertility through afforestation activities of saxaul species on 0.25 million ha and the afforestation area in the Aral Sea will be extended by 1 million ha till 2025. Kyrgyzstan has planned a 1 000 ha annual plantation program to expand protected natural areas to 10 percent. Tajikistan implements 2 000 ha of annual plantation activities to increase the greenhouse gas (GHG) mitigation potential through participatory forestry sector development. Turkmenistan implemented afforestation, soil conservation, forest rehabilitation, pasture rehabilitation, private afforestation, artificial regeneration, and establishment of energy forests activities on 9.62 million ha from 1946 to 2022. Uzbekistan conducts afforestation activities with drought-resistant plant species and established the Golden Century Lake in the Karakum Desert to improve the climate conditions and conserve biodiversity. Uzbekistan declared the Aral Sea region.

Marine Environmental Biology and Conservation Daniel W. Beckman, 2013. Written for the upper level undergraduate or graduate level course. Marine Environmental Biology and Conservation provides an introduction to the environmental and anthropogenic threats facing the world's oceans and outlines the steps that can and should be taken to protect these vital habitats.

Novel Ecosystems Richard J. Hobbs, Eric S. Higgs, Carol Hall, 2013-01-07. Land conversion, climate change, and species invasions are contributing to the widespread emergence of novel ecosystems which demand a shift in how we think about traditional approaches to conservation, restoration, and environmental management. They are novel because they exist without historical precedents and are self-sustaining. Traditional approaches emphasizing native species and historical continuity are challenged by novel ecosystems that deliver critical ecosystem services or are simply immune to practical restorative efforts. Some fear that by raising the issue of novel ecosystems we are simply paving the way for a more laissez-faire attitude to conservation and restoration. Regardless of the range of views and perceptions about novel ecosystems, their existence is becoming ever more obvious and prevalent in today's rapidly changing world. In this first comprehensive volume to look at the ecological, social, cultural, ethical, and policy dimensions of novel ecosystems, the authors argue these altered systems are overdue for careful analysis and that we need to figure out how to intervene in them responsibly. This book brings together researchers from a range of disciplines together with practitioners and policy makers to explore the questions surrounding novel ecosystems. It includes chapters on key concepts and methodologies for deciding when and how to intervene in systems, as well as a rich collection of case studies and perspective pieces. It will be a valuable resource for researchers, managers, and policy makers interested in the question of how humanity manages and restores ecosystems in a rapidly changing world. A companion website with additional resources is available at www.wiley.com/go/hobbs/ecosystems.

Encyclopedia of the Anthropocene, 2017-11-27. Encyclopedia of the Anthropocene Five Volume Set presents a currency-based global synthesis cataloguing the impact of humanity's global ecological footprint. Covering a multitude of aspects related to Climate Change, Biodiversity, Contaminants, Geological Energy, and Ethics, leading scientists provide foundational essays that enable researchers to define and scrutinize information, ideas, relationships, meanings, and

ideas within the Anthropocene concept Questions widely debated among scientists humanists conservationists politicians and others are included providing discussion on when the Anthropocene began what to call it whether it should be considered an official geological epoch whether it can be contained in time and how it will affect future generations Although the idea that humanity has driven the planet into a new geological epoch has been around since the dawn of the 20th century the term Anthropocene was only first used by ecologist Eugene Stoermer in the 1980s and hence popularized in its current meaning by atmospheric chemist Paul Crutzen in 2000 Presents comprehensive and systematic coverage of topics related to the Anthropocene with a focus on the Geosciences and Environmental science Includes point counterpoint articles debating key aspects of the Anthropocene giving users an even handed navigation of this complex area Provides historic seminal papers and essays from leading scientists and philosophers who demonstrate changes in the Anthropocene concept over time
