Expected Value.

The expected value is the value are would expect to get if we performed a trial an influinc account of times. An expecting this is explained through the use of games. We should note the expected value is often not a value that is exhably obtainable?

in practice, this means we take each valve (if), multiply it the its associated probability (P(x)) and sum these together.

Ex. 1 A producting distribution for the random variable s is shown below. Calculate the expected value.

100	- 1	- 2	3	- 4
PORT	0.3	0.75	0.5	8-45

NS - This distribution talk us the only possibilities for y are 1, 2, 3 and 6 and that the probability of 1 occurring is 0 - 2, etc.

$$E(x) = 1(0 \cdot 2) + 1(0 \cdot 2) + 3(0 \cdot 2) + 4(0 \cdot 3) + 4(0 \cdot 3) + 2 \cdot 4$$

Ex. 2 Consider a pingle game whenty a spinear is attached to a circle with three regiments when a player wins the amount determ in the section:

From the presented angles we can note the probability of eleming CIS is $\frac{1}{2}$ will the probability of eleming other CS or CO is $\frac{1}{2}$. We can find the expected probability of this game to follows:

$$A(x) = (15 \times \frac{1}{2}) + (5 \times \frac{1}{2}) + (0 \times \frac{1}{2}) = 0$$
 = 08-25.

The expected value - 68 - 75 - is the fair uplue to take part in this game. If it costs more than this figure to play the game we about that play those a part is financial perspectively whereas if it costs from that the this figure to play the game are should play (again, from a shorter financial perspective).

Ex. 3 Fire based SAA child heads a child testis straw many week. Players more to chance 3 examines between 1 and 20. If you match all three manders with those drawer you win \$1,000 and if you match any 2 numbers you was \$1,000 and if you match any 2 numbers you was \$1,000 and if you match any 2 numbers you was \$1,000 and if you match any 2 numbers you was \$1,000.

Flame are then options to term.

- at AE Sounders correct the probability of this is given by: 20.
- 14. 2 numbers correct the probability of this is given by

Therefore, the expected value in EQCS =
$$\left(1.000 \times \frac{n_{\rm bb}}{10 n_{\rm bb}}\right) \times \left(200 \times \frac{n_{\rm bb}}{10 n_{\rm bb}}\right) \approx 4.5 \cdot 25$$
.

But the probability of winning $-\frac{N_{\rm tot}}{N_{\rm tot}}$ — we phased sleep this as choosing three of the aboved three Sine three numbers which are unfolded in the should divided by the total number of chooses.

For getting two members cornect - \frac{N_{12} - N_{12}}{N_{12}} \table \text{ implies than cornect obscures and one imprincipated choices we need to choose of the desired three items and one of the continuous consenses items, divided by the total number of obscure.

Exercise - Expected Value

Quantize 1: A probability distribution for the random variable x is shown. Calculate the expected value.

Question 2: A probability plants, then for the random variable a to shown. Calculate the asserted value.

	E N	1	100	3	O
POS	+	1	÷	H	÷

Question 3. A game involves fire cards with the numbers 1, 2, 2, 2 and 4. A connectant winn. The amount egus to the value on the card they down.

- Show the expected value for this game is C2 60.
- If the organisms are changing CI to ontor, how much small the organisms expect to make if LIO control and play the game?

The book specifically focuses on the analysis and damping of inter area oscillations in the systems which are in the range of 0 2 1 Hz The damping control action is injected through high power electronic devices known as flexible AC transmission system FACTS controllers Three commonly used FACTS controllers controllable series capacitors CSCs controllable phase shifters CPSs and static var compensators SVCs have been used in this book to control the inter area oscillations. The overview of linear system theory from the perspective of power system control is explained through examples The damping control design is formulated as norm optimization problem The H infinity H2 norm of properly defined transfer functions are minimized in linear matrix inequalities LMI framework to obtain desired performance and stability robustness Both centralized and decentralized control structures are used Usually the transmission of feedback signal from a remote location encounters delays making it difficult to control the system Smith predictor based approach has been successfully explored in this book as a solution to such a problem Robust Control in Power Systems will be valuable to academicians in the areas of power control and system theory as well as professionals in the power industry **Synchronous Generators and Excitation Systems Operating in** a Power System Stefan Paszek, Andrzej Boboń, Sebastian Berhausen, Łukasz Majka, Adrian Nocoń, Piotr Pruski, 2020-01-03 In simulation tests of dynamic states of the power system PS the database of parameters of mathematical models of generating units is most commonly used In many cases the parameter values are burdened with large errors Consequently the results obtained are not reliable and do not allow drawing true conclusions. This monograph presents the developed methods and tools supporting the process of measurement determination of reliable values of parameters of mathematical models of synchronous generators and excitation systems Special measurement tests are the basis for determining the parameters The tests can be carried out in conditions of normal operation of generating units in which electrical machines operate in the state of saturation of magnetic cores and voltage regulators can reach limits This book is intended for specialists in power engineering as well as students of faculties of electrical engineering interested in issues of PS transient states
