ACSM's Health/Fitness Facility Standards and Guidelines-5th Edition American College of Sports Medicine, Sanders, Mary, 2019 ACSM's Health Fitness Facility Standards and Guidelines Fifth Edition presents the current standards and guidelines to help health and fitness establishments provide high quality service and program offerings in a safe environment. Revised by an expert team of professionals with expertise in architecture, health and wellness, law, safety, related practices and policies, and the health and fitness club industry, this authoritative guide provides a blueprint for health and fitness facilities to elevate the standard of care they provide their members as well as enhance their exercise experience. Technical Standards and Design Guidelines Ranjit Gunewardane, 2018-08-13. Retail restaurants, offices, hotel, residential, conference and exhibition centers, and parking are typically being built as part of one large complex. Increasing complexities occur as more and more various types of occupancies are combined into the same buildings. A rapidly developing trend is a desire for mixed use spaces to support lifestyle activities. An increasing number of people are working from home so they need flexible mixed use spaces that can accommodate their lifestyle. People are on the lookout for more luxury amenities such as full fitness and yoga studios, conference centers with commercial kitchens, rooftop pools and spas, and lobby bars and coffee shops. This Technical Standards and Design Guidelines (TSDGs) contains information intended as minimum standards for constructing and equipping new Mixed Use Building projects. Insofar as practical, these standards relate to desired performance or results or both. Details of Architectural and Engineering are assumed to be part of good design practice and local building regulations. This document covers mixed use building facilities common to a multitude of individual facilities. Facilities with unique services will require special consideration. However, sections herein may be applicable for parts of any facility and may be used where appropriate. The Property Developer will supply for each project a functional program for the facility that describes the purpose of the project, the projected demand or utilization. The TSDG includes a description of each function or service, the operational space required for each function, the types of all spaces, the special design features, the systems of operation, and the interrelationships of various functions and spaces. The functional program includes a description of those services necessary for the complete operation of the facility. The functional programs could be applied in the development of project design and construction documents. These standards assume that appropriate architectural, engineering, and technology practices and compliance with applicable codes will be observed as part of normal professional service and require no separate detailed instructions. Specialist designers adopting the TSDGs are encouraged to apply design innovations and the property developer to grant exceptions where the intent of the standards is met. Sustainability and Energy Conservation. Energy efficiency being a part of the building code requirement in many states, the trend is moving toward achieving it. Higher performing building envelopes and higher performing HVAC and lighting systems are some of the essential components to meet current energy codes. The importance of Environmental Sustainability and Energy

Conservation is fully considered in all phases of facility design development Proper planning and selection of building materials mechanical and electrical systems as well as efficient utilization of space and climatic characteristics that will significantly reduce overall energy consumption are fully described The quality of the building facility environment is undoubtedly supportive of the occupants and functions served New and innovative systems that accommodate these considerations while preserving cost effectiveness has been encouraged Architectural elements that reduce energy consumption are considered part of the TSDG In addition to Energy Conservation buildings will be designed to minimize water consumption and operating costs without reducing occupancy standards occupant health safety or comfort Water conservation measures such as water recycling including gray water and rain water collection water purification and sewerage recycling are included for consideration and recommendation in the project specific building energy brief The integration of innovative water efficiency measures such as storm water management rainfall capture treated effluent reuse roof gardens and other alternative sources of water supply are fully described Technology In today's ever changing environment technological standardization and integration of systems is essential Technology is viewed as a competitive tool that contributes to the improvement of building occupant services and operating efficiencies As the importance of access to information increases so do customer demands for such services The Intelligent Buildings Market is a rapidly evolving segment that is being influenced by a number of emerging trends Mobile communications connect people to work entertainment and each other in ways that boost productivity and enhance lives Both Operational Technology OT and Informational Technology IT have entirely changed and it will change even more as we get deeper into the Internet of Things IOT In Building Wireless IBW communications provide the critical link to enable the use of cell phones pagers PDAs two way radios wireless LANs emergency communications and wireless building system devices within an enclosed structure The technology disciplines telecom security building automation and lighting have been going through a convergence over the past several years with telecom wired and wireless networks becoming the common utility for all the technology disciplines

Standards and Guidelines American College of Sports Medicine, 2012-02-14 ACSM's Health Fitness Facility Standards and Guidelines Fourth Edition presents the current standards and guidelines that help health and fitness establishments provide high quality service and program offerings in a safe environment. This text is based in large part on both the work that has begun through the NSF international initiative to develop industry standards to serve as the foundation for a voluntary health and fitness facility certification process and the third edition of ACSM's Health Fitness Facility Standards and Guidelines. The ACSM's team of experts in academic, medical, and health and fitness fields have put together an authoritative guide for facility operators and owners. By detailing these standards and guidelines and providing supplemental materials, ACSM's Health Fitness Facility Standards and Guidelines provides a blueprint for health and fitness facilities to use in elevating the standard of care they provide their members and users as well as enhance their exercise experience. The fourth edition includes new standards and guidelines for pre-activity screening, orientation, education, and supervision, risk management, and emergency procedures, professional staff and independent contractors, facility design and construction, facility equipment, operational practices, and signage. This edition includes these updates: Standards and guidelines aligned with the current version of the pending NSF international health and fitness facility standards. New guidelines addressing individuals with special needs. New standards and guidelines regarding automated external defibrillators (AEDs) for both staffed and unstaffed facilities. Revised standards and guidelines to reflect changing directions and business models within the industry, including 24/7 fitness facilities, medically integrated facilities, and demographic-specific facilities. New standards and guidelines to better equip facilities that are dealing with youth to ensure the proper care of this segment of the clientele. With improved organization, new visual features, and additional appendixes, the fourth edition offers a comprehensive and easy-to-use reference of health and fitness facility standards and guidelines. Readers can readily apply the information and save time and expense using over 30 templates found within the appendixes, including questionnaires, informed consent forms, and evaluation forms. Appendixes also contain more than 30 supplements such as sample preventive maintenance schedules, checklists, and court and facility dimensions. Included in appendix A is Blueprint for Excellence, which allows readers to search efficiently for specific information regarding the standards and guidelines within the book. Health and fitness facilities provide opportunities for individuals to become and remain physically active. As the use of exercise for health care prevention and prescription continues to gain momentum, health and fitness facilities and clubs will emerge as an integral part of the health care system. The fourth edition of ACSM's Health Fitness Facility Standards and Guidelines will assist health and fitness facility managers, owners, and staff in keeping to a standard of operation, client care, and service that will assist members and users in caring for their health through safe and appropriate exercise experiences.
