**Puṣpikā: Tracing Ancient India Through Texts and Traditions** Nina Mirnig, Peter-Daniel Szanto, Michael Williams, 2013-12-23 It is perhaps commonplace to say that India is one of the world's richest and most enticing cultures One thousand years have passed since Albiruni arguably the first Indologist wrote his outsider's account of the subcontinent and two hundred years have passed since the inception of Western Indology And yet what this monumental scholarship has achieved is still outweighed by the huge tracts of terra incognita thousands of works lacking scholarly attention and even more manuscripts which still await careful study whilst decaying in the unforgiving Indian climate In September 2009 young researchers and graduate students in this field came together to present their cutting edge work at the first International Indology Graduate Research Symposium which was held at Oxford University This volume the first in a new series which will publish the proceedings of the Symposium will make important contributions to the study of the classical civilisation of the Indian sub continent The series edited by Nina Mirnig Peter-Daniel Szanto and Michael Williams will strive to cover a wide range of subjects reaching from literature religion philosophy ritual and grammar to social history with the aim that the research published will not only enrich the field of classical Indology but eventually also contribute to the studies of history and anthropology of India and Indianised Central and South East Asia

**Fundamentals in Handwriting Recognition** Sebastiano Impedovo, 2012-12-06 For many years researchers in the field of Handwriting Recognition were considered to be working in an area of minor importance in Pattern Recognition They had only the possibility to present the results of their research at general conferences such as the ICPR or publish their papers in journals such as some of the IEEE series or PR together with many other papers generally oriented to the more promising areas of Pattern Recognition The series of International Workshops on Frontiers in Handwriting Recognition and International Conferences on Document Analysis and Recognition together with some special issues of several journals are now fulfilling the expectations of many researchers who have been attracted to this area and are involving many academic institutions and industrial companies But in order to facilitate the introduction of young researchers into the field and give

them both theoretically and practically powerful tools it is now time that some high level teaching schools in handwriting recognition be held also in order to unite the foundations of the field Therefore it was my pleasure to organize the NATO Advanced Study Institute on Fundamentals in Handwriting Recognition that had its origin in many exchanges among the most important specialists in the field during the International Workshops on Frontiers in Handwriting Recognition

**A Study of Handwriting in Forty Indiana Cities** James Clyde Hedges, 1928

*Imagined Civilizations* Roger Hart, 2013-08-15 Roger Hart debunks the long held belief that linear algebra developed independently in the West Accounts of the seventeenth century Jesuit

Mission to China have often celebrated it as the great encounter of two civilizations The Jesuits portrayed themselves as wise men from the West who used mathematics and science in service of their mission Chinese literati official Xu Guangqi 1562 1633 who collaborated with the Italian Jesuit Matteo Ricci 1552 1610 to translate Euclid s Elements into Chinese reportedly recognized the superiority of Western mathematics and science and converted to Christianity Most narratives relegate Xu and the Chinese to subsidiary roles as the Jesuits translators followers and converts Imagined Civilizations tells the story from the Chinese point of view Using Chinese primary sources Roger Hart focuses in particular on Xu who was in a position of considerable power over Ricci The result is a perspective startlingly different from that found in previous studies Hart analyzes Chinese mathematical treatises of the period revealing that Xu and his collaborators could not have believed their declaration of the superiority of Western mathematics Imagined Civilizations explains how Xu s West served as a crucial resource While the Jesuits claimed Xu as a convert he presented the Jesuits as men from afar who had traveled from the West to China to serve the emperor

**The Roots of Old Chinese** Laurent Sagart, 1999-09-15 The phonology morphology and lexicon of late Zhou Chinese are examined in this volume It is argued that a proper understanding of Old Chinese morphology is essential in correctly reconstructing the phonology Based on evidence from word families modern dialects and related words in neighboring languages Old Chinese words are claimed to consist of a monosyllabic root to which a variety of derivational affixes attached This made Old Chinese typologically more like modern languages such as Khmer Gyarong or Atayal than like Middle and modern Chinese where only faint traces of the old morphology remain In the first part of the book the author proposes improvements to Baxter s system of reconstruction regarding complex initials and rhymes and then reviews in great detail the Old Chinese affixal morphology New proposals on phonology and morphology are integrated into a coherent reconstruction system The second part of the book consists of etymological studies of important lexical items in Old Chinese The author demonstrates in particular the role of proportional analogy in the formation of the system of personal pronouns Special attention is paid to contact phenomena between Chinese and neighboring languages and unlike most literature on Sino Tibetan the author identifies numerous Chinese loanwords into Tibeto Burman The book which contains a

lengthy list of reconstructions an index of characters and a general index is intended for linguists and cultural historians as well as advanced students

**Complex Multiplication and Lifting Problems** Ching-Li Chai, Brian Conrad, Frans

Oort, 2013-12-19 Abelian varieties with complex multiplication lie at the origins of class field theory and they play a central role in the contemporary theory of Shimura varieties They are special in characteristic 0 and ubiquitous over finite fields This book explores the relationship between such abelian varieties over finite fields and over arithmetically interesting fields of characteristic 0 via the study of several natural CM lifting problems which had previously been solved only in special cases In addition to giving complete solutions to such questions the authors provide numerous examples to illustrate the general theory and present a detailed treatment of many fundamental results and concepts in the arithmetic of abelian varieties such as the Main Theorem of Complex Multiplication and its generalizations the finer aspects of Tate's work on abelian varieties over finite fields and deformation theory This book provides an ideal illustration of how modern techniques in arithmetic geometry such as descent theory crystalline methods and group schemes can be fruitfully combined with class field theory to answer concrete questions about abelian varieties It will be a useful reference for researchers and advanced graduate students at the interface of number theory and algebraic geometry

**Pattern Recognition on Oriented Matroids** Andrey

O. Matveev, 2017-09-11 Pattern Recognition on Oriented Matroids covers a range of innovative problems in combinatorics poset and graph theories optimization and number theory that constitute a far reaching extension of the arsenal of committee methods in pattern recognition The groundwork for the modern committee theory was laid in the mid 1960s when it was shown that the familiar notion of solution to a feasible system of linear inequalities has ingenious analogues which can serve as collective solutions to infeasible systems A hierarchy of dialects in the language of mathematics for instance open cones in the context of linear inequality systems regions of hyperplane arrangements and maximal covectors or topes of oriented matroids provides an excellent opportunity to take a fresh look at the infeasible system of homogeneous strict linear inequalities the standard working model for the contradictory two class pattern recognition problem in its geometric setting The universal language of oriented matroid theory considerably simplifies a structural and enumerative analysis of applied aspects of the infeasibility phenomenon The present book is devoted to several selected topics in the emerging theory of pattern recognition on oriented matroids the questions of existence and applicability of matroidal generalizations of committee decision rules and related graph theoretic constructions to oriented matroids with very weak restrictions on their structural properties a study in which in particular interesting subsequences of the Farey sequence appear naturally of the hierarchy of the corresponding tope committees a description of the three tope committees that are the most attractive approximation to the notion of solution to an infeasible system of linear constraints an application of convexity in oriented matroids as well as blocker constructions in combinatorial optimization and in poset theory to enumerative problems on tope committees an attempt to clarify how elementary changes one element reorientations in an oriented matroid affect the family
