### Cytochromes P450: Drug Metabolism, Bioactivation and Biodiversity 2.0

Patrick M. Dansette,Danièle Werck-Reichhart,2021-08-31 This book Cytochromes P450 Drug Metabolism Bioactivation and Biodiversity presents five papers on human cytochrome P450 CYP and P450 reductase three reviews on the role of CYPs in humans and their use as biomarkers six papers on CYPs in microorganisms and one study on CYP in insects The first paper reports the in silico modeling of human CYP3A4 access channels The second uses structural methods to explain the mechanism based inactivation of CYP3A4 by mibepradil 6 7 dihydroxy bergamottin and azamulin The third article compares electron transfer in CYP2C9 and CYP2C19 using structural and biochemical methods and the fourth uses kinetic methods to study electron transfer to CYP2C8 allelic mutants The fifth article characterizes electron transfer between the reductase and CYP using in silico and in vitro methods focusing on the conformations of the reductase Then two reviews describe clinical implications in cardiology and oncology and the role of fatty acid metabolism in cardiology and skin diseases The second review is on the potential use of circulating extracellular vesicles as biomarkers Five papers analyze the CYPomes of diverse microorganisms the Bacillus genus Mycobacteria the fungi Tremellomycetes Cyanobacteria and Streptomyces The sixth focuses on a specific Mycobacterium CYP CYP128 and its importance in M tuberculosis The subject of the last paper is CYP in Sogatella furcifera a plant pest and its resistance to the insecticide sulfoxaflo

Yamasaki,1996-04-22 Sensors are the front end devices for information acquisition from the natural and or artificial world Higher performance of advanced sensing systems is achieved by using various types of

machine intelligence Intelligent sensors are smart devices with signal processing functions shared by distributed machine intelligence Typical examples of intelligent sensors are the receptors and dedicated signal processing systems of the human sensory systems The most important job of information processing in the sensory system is to extract necessary information from the receptors signals and transmit the useful information to the brain This dedicated information processing is carried out in a distributed manner to reduce the work load of the brain The processing also lightens the load of signal transmission through the neural network the capacity of which is limited Although the performance of the receptors in our human sensory system is not always ideal and is frequently inferior to that of man made sensors the total performance is usually far superior to those of our technical sensing systems The weak points of human receptors are masked by the information processing This processing makes our sensory system adaptable to the environment and optimizes system performance The basic idea of this book which contains new computing paradigms is that the most advanced intelligent sensing system is the human sensory system Section I reviews the technologies of intelligent sensors and discusses how they developed Typical approaches for the realization of intelligent sensors emphasizing the architecture of intelligent sensing systems are also described In section II fundamental technologies for the fabrication of intelligent sensors and actuators are presented Integration and micro miniaturization techniques are emphasized Section III presents advanced technologies approaching human sensory systems these technologies are not directly aimed at practical applications but introduce the readers to the development of engineering models of sensory systems Technologies of integrated intelligent sensors which will shortly be in use are introduced in section IV In section V examples are given of intelligent sensing systems which are used in industrial installations Hardware for machine intelligence is not integrated at present but can soon be implemented in the monolithic integrated structure Without this machine intelligence new functions for example self diagnosis or defects identification cannot be realized This section also demonstrates the potential of intelligent sensors in industry Section VI introduces two interesting topics which are closely related to intelligent sensing systems The first one is multisensor fusion It is expected to be one of the fundamental and powerful technologies for realizing an advanced intelligent sensing systems The second is visualizing technology of the sensed states for easy comprehension of the dynamic multi dimensional state This is useful for intelligent man machine interfaces This book will be recognised by readers as a milestone in the rapid progress of intelligent sensors    *Nucleic Acids Symposium Series* ,1986 No 6 are papers presented at the Symposium on Nucleic Acids Chemistry
