Brick and Block Masonry Claudio Modena, F. da Porto, M.R. Valluzzi, 2016-11-03 *Brick and Block Masonry Trends Innovations and Challenges* contains the lectures and regular papers presented at the 16th International Brick and Block Masonry Conference Padova Italy 26-30 June 2016. The contributions cover major topics: Analysis of masonry structures; Bond of composites to masonry; Building physics and durability; Case studies; Codes and standards; Conservation of historic buildings; Earthen constructions; Eco materials and sustainability; Fire resistance; Blasts and impacts; Masonry bridges, arches and vaults; Masonry infill walls and RC frames; Masonry materials and testing; Masonry repair and strengthening; New construction techniques and technologies; Reinforced and confined masonry; Seismic performance and vulnerability assessment. In an ever-changing world in which innovations are rapidly implemented but soon surpassed, the challenge for masonry, the oldest and most traditional building material, is that it can address the increasingly pressing requirements of quality of living, safety and sustainability. This abstracts volume and full paper USB device focusing on challenges, innovations, trends and ideas related to masonry in both research and building practice will prove to be a valuable source of information for researchers and practitioners, masonry industries and building management authorities, construction professionals and educators.

INNOVATIONS TECHNOLOGIES IN SCIENCE AND PRACTICE, 2022-02-15 Proceedings of the VI International Scientific and Practical Conference. *Structure from Motion in the Geosciences* Jonathan L. Carrivick, Mark W. Smith, Duncan J. Quincey, 2016-07-15 *Structure from Motion with Multi View Stereo* provides hyperscale landform models using images acquired from standard compact cameras and a network of ground control points. The technique is not limited in temporal frequency and can provide point cloud data comparable in density and accuracy to those generated by terrestrial and airborne laser scanning at a fraction of the cost. It therefore offers exciting opportunities to characterise surface topography in unprecedented detail and with multi-temporal data to detect elevation position and volumetric changes that are symptomatic of earth surface processes. This book firstly places Structure from Motion in the context of other digital surveying methods and details the Structure from Motion workflow including available software packages and assessments of uncertainty and accuracy. It then critically reviews current usage of Structure from Motion in the geosciences, provides a synthesis of recent validation studies and looks to the future by highlighting opportunities arising from developments in allied disciplines. This book will appeal to academics, students and industry professionals because it balances technical knowledge of the Structure from Motion workflow with practical guidelines for image acquisition, image processing and data quality assessment and includes case studies that have been contributed by experts from around the world.
