The PLC supports up to 64 individually-configurable channels, allowing flexibility for programming safety instrumented functions and to design specifically the architecture to meet the DeltaV system architecture. Microprocessors are completely reloaded from the channel (PLC) memory to the PLC. Integrated power supply and logic components are in the PLC.

The system architecture offers full project lifecycle, provides significant savings in system design, installation, and even of maintenance required from the time the marshalling with the safety logic DeltaV logic solver is complete. The modular design and architecture of the system allows for the installation of safety logic solver and the associated safety related wiring and the process related and electrical wiring significantly savings.

The DeltaV SIS process safety system has the ability to provide a single hardware architecture for the logic solver and gateway, increasing the reliability of the safety architecture. This is achieved by the DeltaV logic solver and gateway being a single hardware unit, allowing for the integration of the DeltaV SIS architecture with the DeltaV SIS architecture.
