Glass is one of the most versatile materials in architecture. It can be used in a wide range of ways, from a simple window to a complex, multi-layered system. The most common use of glass is in windows, which allow light to enter a building and provide a view of the outside world. However, glass can also be used in a variety of other ways, such as in doors, partitions, and decorative elements.

From light to glass to structural building material

The first time glass was used in architecture was in the form of a window. This was done in order to allow light to enter a building and provide a view of the outside world. However, glass can also be used in a variety of other ways, such as in doors, partitions, and decorative elements.

Facade Construction Manual Thomas Herzog, Roland Krippner, Werner Lang, 2017-09-12 In recent years facades have become more important in architectural practice and in public perception As well as functioning as a protective shell and visible face and supplying heat and electricity a building's exterior interacts directly with the surrounding public space This revised and expanded new edition of the Facade Construction Manual offers readers technical and design planning fundamentals in a compact reference work A section describing a comprehensive selection of built structures shows general and unique tried and tested and innovative approaches to facade planning down to the last detail

Prefabricated Systems Ulrich Knaack, Sharon Chung-Klatte, Reinhard Hasselbach, 2012-12-13 For a number of years modular construction the use of prefabricated elements in architecture has once again become a subject of lively discussion and debate Long written off as monotonous today's building components are actually highly differentiated and capable of supporting and enhancing the architect's creativity Numerous structures work with prefabricated components for single family homes the figure is ninety eight percent and modular systems are available that meet high aesthetic standards This book provides an overview of the various different systems and their possible uses particularly in the areas of housing office and industrial buildings It explains the processes and components of modular construction and the behavior of the various materials when this construction approach is used The authors offer strategies for planning and designing with prefabricated systems so that the architect can use them productively Numerous drawings explain the principles of modular construction while built examples forge a link between those principles and the practical activity of building

Contemporary Curtain Wall Architecture Scott Charles Murray, 2009-10-07 In Contemporary Curtain Wall Architecture building technology historian and architect Scott Murray traces the evolution of the curtain wall from early skeleton frame structures of the past

to today's complex and technologically advanced configurations. Presenting twenty-four detailed case studies of exemplary structures completed in the last decade, he reveals the curtain wall as one of the most enduring and malleable concepts of contemporary architecture, capable of adapting intelligently to site constraints, utilizing resources efficiently, and offering unprecedented opportunities for innovations in digital design and fabrication, material detailing, and aesthetic expression.

Book Jacket *Interiors Construction Manual* Gerhard Hausladen, Karsten Tichelmann, 2012-12-10 Soccer stadiums, airports, theaters, museums, it falls to very few architects to tackle spectacular building tasks like these. The everyday work of most architects is more often focused on manageable projects like the renovation, remodeling, or rebuilding of single and multi-family houses, schools, and offices. Whatever the nature of the building task, interior construction is always a significant design and qualitative challenge that calls for highly detailed technical expertise. After all, it affects the realm that will be brought to life and utilized by the user when the task is finished, and whose aesthetic and functional serviceability will be put to the test each and every day. The *Interior Construction Manual* supports planners in their daily work as a practical planning aid and reference work with the relevant standards, guidelines, reference details, and constructional solutions, all illustrated by built example projects. It brings together the crucial facts on all aspects of interior construction and presents the key fundamentals of building physics, fire protection, interior construction systems, and openings. In addition, it offers concrete tips on integrated planning, approaches, energy, and sustainability issues, materials used in interior construction, hazardous substances, and dealing with building services and light planning.

Construction Manual for Polymers + Membranes Jan Knippers, Jan Cremers, Markus Gabler, Julian Lienhard, 2012-12-17 Whether it be as translucent sheets, broadly stretched membranes, and inflated foil cushions, or in graceful organic curves, architecture today is utilizing plastics in the most disparate forms and for a wide variety of purposes. Innovative technical developments are constantly improving its material properties; at the same time, there is a growing new awareness of its potential as a construction material. While plastics used to be employed primarily as an inexpensive variant on traditional building materials, they are increasingly regarded in the construction world today as a serious and viable alternative, be it as supporting structures, roofs, facades, or elements of interior design and decoration. Thanks in large part to this inherent self-sufficiency, plastics are currently enjoying an unprecedented surge in popularity, even among the international architectural avant-garde, as multiwall sheets or corrugated fiber-reinforced panels, or as filling between glass panes. And the new generation of ecological bioplastics also pays tribute to the debate on sustainability, ridding plastics of their lingering reputation as environmental offenders. From the history of plastics and membranes in architecture to their material properties and requirements in construction and design, the *Plastics and Membranes Construction Manual* cuts to the chase, providing the kind of solid and comprehensive overview of the subject that readers have come to expect from the *Im DETAIL* series. Selected project examples round off the reference work and make it indispensable for the day-to-day life of the professional planner and for every architecture library.

Integration and Design of Solar Thermal Systems Maria Cristina Munari Probst, Christian Roecker, 2011-01-01 Although solar thermal systems are technologically mature and cost effective they have not yet been sufficiently used in building design to play an adequate role in the reduction of fossil fuel consumption One main hindrance to adoption is the generally low architectural design quality of the building integration of these thermal systems Starting from a definition of architectural integration quality and related criteria this book is intended to help both architects and manufacturers improve their design work

Bio-based Building Skin Anna Sandak, Jakub Sandak, Marcin Brzezicki, Andreja Kutnar, 2019-03-04 This book provides a compendium of material properties demonstrates several successful examples of bio based materials application in building facades and offers ideas for new designs and novel solutions It features a state of the art review addresses the latest trends in material selection assembling systems and innovative functions of facades in detail Selected case studies on buildings from diverse locations are subsequently presented to demonstrate the successful implementation of various biomaterial solutions which defines unique architectural styles and building functions The structures morphologies and aesthetic impressions related to bio based building facades are discussed from the perspective of art and innovation essential factors influencing the performance of materials with respect to functionality and safety are also presented Special emphasis is placed on assessing the performance of a given facade throughout the service life of a building and after its end The book not only provides an excellent source of technical and scientific information but also contributes to public awareness by demonstrating the benefits to be gained from the proper use of bio based materials in facades As such it will appeal to a broad audience including architects engineers designers and building contractors

Façades Ulrich Knaack, Tillmann Klein, Marcel Bilow, Thomas Auer, 2014-09-05 Introduction to building fa ades as revised edition Fa ades determine the appearance of a building Hence they constitute a major element in architecture At the same time the building s envelope has important functions to fulfil such as lighting weatherproofing thermal insulation load transfer and sound insulation Over the past 15 years fa ades have become increasingly complex intelligent facades for instance adapt to changing climate and lighting conditions Newly developed materials and technologies have broadened the scope of fa ade functions This book demonstrates the principles of fa ade construction It systematically describes the most common types such as post and beam fa ade curtain wall corridor fa ade or double fa ade and provides guidelines for appropriate detailing Numerous drawings made especially for the book explain the principles of different types of facades which are then illustrated with built examples For this second edition all chapters were revised and all four examples in the case studies chapter were replaced by new material The new chapter Future Fa ades offers insights into what s next

Basics Facade Apertures Roland Krippner, Florian Musso, 2017-05-22 Facade apertures represent the realm of the exterior wall or facade which establishes the connection between inside and out and makes it possible to illuminate and ventilate the spaces behind it This volume deals with the various forms of openings such as doors windows ventilation elements and fixed glass panes

Facade Engineering: Design and Implementation of Building Facades Charles Nehme, Building facades are the first impression of any structure acting as a bridge between the external environment and the interior spaces Over the years the role of facades has evolved far beyond aesthetics transforming into dynamic systems that enhance energy efficiency occupant comfort and environmental sustainability Facade engineering as a multidisciplinary field is at the forefront of this transformation integrating architecture engineering and technology to create building envelopes that are not only visually striking but also high performing This book Facade Engineering Design and Implementation of Building Facades is a comprehensive exploration of the design functionality and execution of facades in modern buildings It is intended for architects engineers contractors students and professionals involved in the built environment offering insights into the critical considerations of facade design and implementation From material selection and weather protection to energy efficiency and integration with building services this book provides a holistic view of facade engineering It delves into sustainable practices the incorporation of advanced technologies and the challenges of retrofitting aging facades to meet modern standards Real world case studies and examples further enrich the content illustrating how innovative facade solutions can address the demands of contemporary architecture and urban development As the world shifts toward net zero energy buildings and climate resilient designs facades play an increasingly vital role in shaping sustainable and smart cities By understanding the principles and possibilities of facade engineering we can contribute to a built environment that not only meets the needs of today but also anticipates the challenges of tomorrow I invite you to join me on this journey into the fascinating world of facade engineering where creativity meets science and innovation drives progress Whether you are designing a new building upgrading an existing one or simply exploring the field this book offers the knowledge and inspiration to push the boundaries of what facades can achieve

Enclose | Build Eva Maria Herrmann, Martin Krammer, Jörg Sturm, Susanne Wartzeck, 2015-07-01 The building shell is the interface with the outside world it offers protection and at the same time represents its owners or occupants But what are the criteria for choosing a specific shell Why is a particular material used on a particular undercoat The fifth volume of the SCALE series Enclose Build is not about the curtain the dressing of the facade that surrounds a building but rather on a causal level about the exterior termination of a building the wall the facade which can be made of various materials surfaces and achieves different design effects It shows the conditions under which certain constructions can be employed and why what criteria such as construction costs issues of sustainability of energy efficiency of assembly or of insulation or protection against moisture can also influence the choice of a system In addition to classical constructions Enclose Build offers a look at future developments How will the facade evolve as an interface for information What do viable concepts for environmentally active energy efficient building shells look like Enclose Build is an indispensable tool for every

architect and planner **Modern Construction Case Studies** Andrew Watts, 2019-06-17 Modern Construction Case Studies focuses on the interface between the design of facades structures and environments of 12 building projects all developed by Newtecnic The Author compares facade technologies particularly in the way they interface with structure and MEP mechanical electrical plumbing services in complex projects to provide insights into the design process for building envelopes Each envelope technology is described with an emphasis on one of three aspects geometry construction and performance The analysis links the 12 case studies by comparing their structural and environmental performance The aim is achieved by analyzing typical bays which are representative of each project and which illustrate the implications of using different building envelope technologies Performance of Combustible Façade Systems Used in Green Building Technologies Under Fire Gaurav Srivastava, Pravinray D. Gandhi, 2021-08-31 This book addresses fire safety of combustible fa ade systems which has gained much attention in recent times due to several major fire accidents across the world where combustible fa ade systems had a significant role in enhancing the growth of fire The Grenfell tower London fire is one of the most severe accident in this category The book covers basic design and functional aspects of commonly used fa ade systems along with the materials typically used in such systems Subsequently it discusses the currently available testing methods at component level intermediate level and system level It also provides detailed case studies of six full scale real fire fa ade fire experiments that have been jointly carried out by IIT Gandhinagar and Underwriters Laboratories at the full scale fa ade testing facility established at IIT Gandhinagar The book will enable designers and decision makers to make better assessments regarding fire safety of existing and upcoming fa ade systems It also serves as a guide to deciding which testing methods are more appropriate under certain conditions **Construction of the Façade Systems** Ingrid Paoletti, Massimiliano Nistri, 2023-12-04 The book explores the advanced fa ade systems according to the productive and constructive contents in a cognitive and operative form as a manual text to provide guidelines for researchers technicians and professionals It provides operational guidance for the technological design production planning and site executive coordination for the realization of fa ade systems The analysis deals with the main building elements and technical interfaces The study of the fa ade systems after explaining the anchoring structures and their connections to the load bearing elements investigates the criteria for the assembly between the framings In particular the book examines the technical interfaces of the main advanced envelope systems with respect to the functional constructive and applicative coordination procedures of the mullions and transoms framing of the structural sealant glazing fa ade system of the unit fa ade system of the suspended fa ade system and of the double skin fa ade system The technical and manual character of the book is also expressed through the analysis of the functional and application procedures of the gaskets with respect to the fa ade systems in order to prevent the transmission of air and water loads the analysis focuses on the connections between the framing and the enclosure elements of the envelope in accordance with the compensation of height differences in order to guarantee impermeability

airtightness and insulation Then the book describes the assembly and interface conditions between elements of different composition and production within the fa ade systems the examination of the technical interfaces involves the development and application of sealants based on the loads exerted on the jointing devices in order to fulfill the requirements of sealing and tightness with respect to mechanical thermal and hygrometric water air and wind stresses Moreover the study of the envelope systems examines the methodologies directed toward fulfilling the requirements with respect to the actions caused by fire loads considering the contents related to both components and connections and fixing surfaces *Executive Design of the Façade Systems* Ingrid Paoletti,Massimiliano Nastri,2023-09-25 The book examines the typological and technological constitution of the principal advanced fa ade systems in the contemporary design and experimental scenario proposing itself as a knowledge and operational tool currently lacking in the technical literature of the sector at an international level It considers the field of advanced fa ade systems in a scientific way constituting a support for the study and the executive design The book investigates in detail in an analytical form the constitution of the components on a typological and geometrical functional and constructive level on the basis of the documents and knowledges acquired from the essential contemporary production and construction references At the same time the book is configured in a handbook form as a reference for understanding and application with respect to traditional and complex fa ade systems For each main type of fa ade the book provides explanations and scientific information for investigating and designing the advanced fa ades according to the characteristics of the mullions and transoms fa ade system stick system of the structural sealant glazing fa ade system of the unit fa ade system of the suspended fa ade system and of the double skin fa ade system Single Family Houses Christian Schittich,2012-12-17 The private single family house is still very much the preferred choice of home Yet in recent years there have been many changes not only in the personal situations of the residents their expectations and desires but also in the rising costs of energy and raw materials This has meant that issues such as multi functionalism the use of innovative building materials or energy efficient building methods are increasing in significance In this completely revised and expanded second edition these topical developments have been taken into consideration The organisation and layout of the first volume with its concise and detailed project documentation has been retained The authors introduce floor plan solutions using contemporary projects which bear in mind changing family structures At the same time the contributions provide an in depth introduction to planning single family houses from the design of the floor plan to useful tips for the realisation In addition to this fundamental information 22 projects are documented providing ideas and inspiration for planners students and clients The international selection of projects highlights current trends in planning and designing single family housing and reveals the tried and tested basics **Building to Suit the Climate** Petra Liedl,Gerhard Hausladen,Michael Saldanha,2012-11-05 In future buildings that make sense from a bioclimatic perspective will not be the exception planners will simply be expected to design them With its wealth of facts this book serves as a concrete aid to

planning and design With the planning process as its roadmap it accompanies the planner from the basic evaluation stage through conception and implementation planning all the way to building operation The building related characteristics of the various climatic zones form the basis for the made to measure development of integrated building solutions Well conceived graphics illustrate planning contexts and facilitate efficient planning decisions and realistic predimensioning Materials systems and technologies are described and their areas of application are pointed out Reference parameters costs and the presentation of interrelationships equip the planner to make a strategic and well informed selection **Architectural**
