dimensional system analysis method contains inherent defects in the required accuracy and spatial resolution for a number of important nuclear reactor thermal hydraulic phenomena. At present the CFD method has been widely adopted in the nuclear industry across both light water reactors and liquid metal cooled fast reactors providing an effective solution for complex issues of thermal hydraulic analysis. However the CFD method employs empirical models for turbulence simulation, heat transfer, multi phase interaction and chemical reactions. Such models must be validated before they can be used with confidence in nuclear reactor applications. In addition user practice guidelines play a critical role in achieving reliable results from CFD simulations.
