Heitmeyer, Heinz-Gerhard Haupt, Stefan Malthaner, Andrea Kirschner, 2010-11-04 The Control of Violence in Modern Society starts from the hypothesis that in modern society we will face an increasing loss of control over certain phenomena of violence This leads to unpredictable escalations and violence can no longer be contained adequately by the relevant control regimes such as police state surveillance institutions national repression apparatuses and international law However before investigating this hypothesis from an internationally and historically comparative perspective the terms and tools for this undertaking have to be rendered more precisely Since both control and violence are all but clear cut terms but rather highly debatable and contested concepts that may take multiple connotations The main question is whether an increase in certain forms of violence can be explained by the failure or in turn overeffectiveness of certain control mechanisms It is asked for

instance which contribution religion can make to limit violence and in turn which destructive potential religion might have in its fundamentalist form Moreover the concept of individual self control as well as social institutions and strategies of collective disengagement and de radicalization are investigated with regard to their potential for controlling violence The Control of Violence in Modern Society concludes with a re examination of the hypothesis of a loss of control by specifying in what cases and under which circumstances we can speak of a loss of control over violence S. Co. 2009. Sixth Conference. Complex Data Modeling and Computationally Intensive Statistical Methods for Estimation and Prediction ,2009 **Money as a Global Phenomenon** Andreas Rees,2011 Uncertainty Analysis in Econometrics with Applications Van-Nam Huynh,Vladik Kreinovich,Songsak Sriboonchitta,Komsan Suriya,2012-12-14 Unlike uncertain dynamical systems in physical sciences where models for prediction are somewhat given to us by physical laws uncertain dynamical systems in economics need statistical models In this context modeling and optimization surface as basic ingredients for fruitful applications This volume concentrates on the current methodology of copulas and maximum entropy optimization This volume contains main research presentations at the Sixth International Conference of the Thailand Econometrics Society held at the Faculty of Economics Chiang Mai University Thailand during January 10 11 2013 It consists of keynote addresses theoretical and applied contributions These contributions to Econometrics are somewhat centered around the theme of Copulas and Maximum Entropy Econometrics The method of copulas is applied to a variety of economic problems where multivariate model building and correlation analysis are needed As for the art of choosing copulas in practical problems the principle of maximum entropy surfaces as a potential way to do so The state of the art of Maximum Entropy Econometrics is presented in the first keynote address while the second keynote address focusses on testing stationarity in economic time series data

Asset Allocation Considerations for Pension Insurance Funds Christian Hertrich,2013-04-16 The central research objective of the dissertation is to assess the suitability of Social Responsible Investments SRIs as well as alternative investments for the strategic asset allocation of German Pension Insurance Funds Pensionskassen Using a Vector Error Correction model we estimate the data generating process of the underlying input variables A bootstrap simulation allows generating future return paths of the underlying portfolios These return distributions will subsequently be used as input for different asset allocation strategies The empirical results of our research study offer valuable conclusions 1 SRI structured portfolios consistently perform better than conventional portfolios 2 including alternative investments has a beneficial effect on the risk return distribution and 3 derivative overlay structures mitigate downside risk exposure without impacting average fund performance In terms of alternative allocation models 1 high equity portfolios lead to an increase in return volatility without sufficiently compensating investors with higher returns 2 hedging against price increases by engineering a portfolio with inflation suitable assets yields mixed results 3 a portfolio composition that combines derivative overlay strategies for both equities and corporate bonds and uses SRI screened assets as underlying generates the best results **The**
