Darwin's Cathedral David Sloan Wilson, 2010-09-16 One of the great intellectual battles of modern times is between evolution and religion Until now they have been considered completely irreconcilable theories of origin and existence David Sloan Wilson's Darwin's Cathedral takes the radical step of joining the two in the process proposing an evolutionary theory of religion that shakes both evolutionary biology and social theory at their foundations The key argues Wilson is to think of society as an organism an old idea that has received new life based on

recent developments in evolutionary biology If society is an organism can we then think of morality and religion as biologically and culturally evolved adaptations that enable human groups to function as single units rather than mere collections of individuals Wilson brings a variety of evidence to bear on this question from both the biological and social sciences From Calvinism in sixteenth century Geneva to Balinese water temples from hunter gatherer societies to urban America Wilson demonstrates how religions have enabled people to achieve by collective action what they never could do alone He also includes a chapter considering forgiveness from an evolutionary perspective and concludes by discussing how all social organizations including science could benefit by incorporating elements of religion Religious believers often compare their communities to single organisms and even to insect colonies Astoundingly Wilson shows that they might be literally correct Intended for any educated reader Darwin's Cathedral will change forever the way we view the relations among evolution religion and human society

Darwin's Devices John Long, 2012-04-03 What happens when we let robots play the game of life br Darwin's Devices Long tells the story of these evolving biorobots how they came to be and what they can teach us about the biology of living and extinct species Evolving biorobots can replicate creatures that disappeared from the earth long ago showing us in real time what happens in the face of unexpected environmental challenges Biomechanically correct models of backbones functioning as part of an autonomous robot for example can help us understand why the first vertebrates evolved them But the most impressive feature of these robots as Long shows is their ability to illustrate the power of evolution to solve difficult technological challenges autonomously without human input regarding what a workable solution might be Even a simple robot can create complex behavior often learning or evolving greater intelligence than humans could possibly program This remarkable idea could forever alter the face of engineering design and even warfare An amazing tour through the workings of a fertile mind Darwin's Devices will make you rethink everything you thought you knew about evolution robot intelligence and life itself

Empiricism and Darwin's Science F. Wilson, 2012-12-06 I would like to record my thanks to Paul Thompson for useful conversations over the years and also to several generations of students who have helped me develop my ideas on biological theory and on Darwin My wife has as usual been more than helpful in particular she typed a good portion of the manuscript while I was on leave a few years ago more now than I like to remember My parents were both looking forward to holding a final copy of this book I only regret that my mother did not live long enough to see its completion I must also thank the publishers and their staff They have been remarkably patient about meeting deadlines promises were repeatedly made and then owing to family situations had to be broken and for this I am considerably in their debt I would further like to thank the following authors and publishers for permission to use their work R C Lewontin The Genetic Basis of Evolutionary Change Figure 1 p 14 1964 Columbia University Press reprinted here by kind permission of the author and publisher F Wilson Goudge's Contribution to the Philosophy of Science in L W Sumner J G Slater and F Wilson eds Pragmatism and Purpose Essays in Honour of T A Goudge 1964 University of Toronto Press

Darwin's Argument by Analogy Roger M. White,M. J. S. Hodge,Gregory Radick,2021-11-04 In On the Origin of Species 1859 Charles Darwin put forward his theory of natural selection Conventionally Darwin s argument for this theory has been understood as based on an analogy with artificial selection But there has been no consensus on how exactly this analogical argument is supposed to work and some suspicion too that analogical arguments on the whole are embarrassingly weak Drawing on new insights into the history of analogical argumentation from the ancient Greeks onward as well as on in depth studies of Darwin s public and private writings this book offers an original perspective on Darwin s argument restoring to view the intellectual traditions which Darwin took for granted in arguing as he did From this perspective come new appreciations not only of Darwin s argument but of the metaphors based on it the range of wider traditions the argument touched upon and its legacies for science after the Origin

Science Fraud: Darwin's Plagiarism of Patrick Matthew's Theory Mike Sutton,2023 Patrick Matthew in 1831 originated the complete theory of evolution by natural selection in his book On Naval Timber and Arboriculture and did so before Charles Darwin and Alfred Wallace claimed to independently replicate it in 1858 Unjustly and against the Arago convention on priority a ruling that gives origination of any science theory to the first to publish Matthew has been illicitly denied his priority on the grounds he never influenced anyone with his breakthrough Today Big Data research has uncovered Darwin s science fraud by plagiarism revealing evidence which proves beyond all reasonable doubt that he and Alfred Wallace both independently plagiarised the theory of evolution by natural selection from Patrick Matthew Books have been newly unearthed in the publication record to show that at least 30 people cited Matthew s work in published literature before 1858 and that several were known influencers of Darwin s and Wallace s work in the field Additionally several people in Darwin s and Wallace s social circles were first to be second into print using original terms coined by Matthew in his bombshell breakthrough book This book reveals all the newly unearthed data and essentially explains it alongside the deplorable treatment of Patrick Matthew in scholarly historical context Dr Mike Sutton further reveals using social science participatory observation methods and experimental results how members of the so called Darwin Industry enabled and facilitated by the deliberate publication of falsehoods and other grossly misleading editing on Wikipedia have disgracefully worked to re bury these newly unearthed facts by means of knee jerk blind sight ignorant rejection blatant and deliberate fact denial censorship persistent and serious workplace harassment obscene social media abuse poison pen emails lies mischievous misrepresentation and repeat research plagiarism [Resources in Education](#) ,1998 [Can Science Make Sense of Life?](#) Sheila Jasanoff,2019-03-05 Since the discovery of the structure of DNA and the birth of the genetic age a powerful vocabulary has emerged to express science s growing command over the matter of life Armed with knowledge of the code that governs all living things biology and biotechnology are poised to edit even rewrite the texts of life to correct nature s mistakes Yet how far should the capacity to manipulate what life is at the molecular level authorize science to define what life is for This book looks at flash points in law politics ethics and culture to argue that science s promises of perfectibility have gone too far Science may have editorial control over the material elements of life but it does not supersede the languages of sense making that have helped define human values across millennia the meanings of autonomy integrity and privacy the bonds of kinship family and society and the place of humans in nature **The Philosophy of Evolutionary Theory** Elliott Sober,2024-02-08 Natural selection mutation and adaptation are well known and central topics in Darwin s theory of evolution and in the 20th and 21st century theories which grew out of it but many other important topics are used

in evolutionary biology that raise interesting philosophical questions In this book Elliott Sober analyses a much larger range of topics including fitness altruism common ancestry chance taxonomy phylogenetic inference operationalism reductionism conventionalism null hypotheses and default reasoning instrumentalism versus realism hypothetico deductivism essentialism falsifiability the principle of parsimony the principle of the common cause causality determinism versus indeterminism sensitivity to initial conditions and the knowability of the past Sober's clear philosophical analyses of these key concepts arguments and methods of inference will be valuable for all readers who want to understand evolutionary biology in both its Darwinian and its contemporary forms
