Principles and Applications of Modified Atmosphere Packaging of Foods B. Blakistone, 2013-12-14 Modified atmosphere packaging may be defined as an active packaging method in which an altered atmosphere is created in the headspace that retards chemical deterioration while simultaneously retarding growth of spoilage organisms Shelf lives of perishable products such as dairy products meat poultry fish fruits and vegetables and bakery items are limited by biochemical changes in the product catalysed by exposure to the normal atmosphere 21 % oxygen 78% nitrogen and less than 0.1 % carbon dioxide and growth of spoilage organisms Modification of the atmosphere within a package containing these products helps to better maintain the quality of the food under longer storage conditions and retards the growth of undesirable organisms Of course deterioration is also slowed by chilling which is required for the transport to market of highly perishable items like

meat poultry and fish that would either spoil or have the potential for contamination by certain food pathogens Chilling plus a modification of the atmosphere optimizes the keeping quality of food Modification of the atmosphere has been known for over a century as a means of food preservation and has become a very popular means of food preservation in the latter part of the 20th century Modified atmosphere packaging MAP is practised extensively in Europe Canada and the US Both vacuum packaging removal of air from the package and addition of gases within the package are considered MAP

Fish Canning Handbook Les Bratt, 2010-09-29. Fish Canning Handbook. Fish Canning Handbook. Edited by Les Bratt. Canning continues to be an extremely important form of food preservation commercially and canned fish represents a source of relatively inexpensive, nutritious and healthy food which is stable at ambient temperatures, has long shelf life and in consequence is eminently suitable for worldwide distribution. It is vitally important that all canning operations are undertaken in keeping with the rigorous application of good manufacturing practices if the food is to be safe at the point of consumption. This demands that all personnel involved in the management and operation of cannery operations have a competent understanding of the technologies involved, including the basic requirements for container integrity and safe heat sterilisation. This book provides a source of up to date and detailed technical information for all those involved in the production of canned fish, from students thinking of entering the industry to regulatory authorities with responsibility for official inspection, trading companies and retail organisations who purchase canned fish as well as the manufacturers themselves. An exhaustive range of topics is covered in 15 chapters, including the current global market, processing, packaging and storage operations, food safety and quality assurance, international legal requirements and laboratory analysis.
