*Wind Turbine Aerodynamic Performance Calculation* Tongguang Wang, Wei Zhong, Yaoru Qian, Chengyong Zhu, 2023-11-13 This book deals with horizontal axis wind turbine aerodynamic performance prediction methods. It focuses on the traditional and newly developed methods for the wind turbine aerodynamic performance calculation. The fundamental theories of fluid mechanics essential for understanding the other parts of this book are firstly introduced in Part I followed by the blade element momentum theory in Part II with special attentions to a systematic review of various correction models. Part III is mainly about the prescribed and free vortex wake methods while the state of art computational fluid dynamics CFD methods are detailed in Part IV. Part III thoroughly describes the prescribed and free vortex wake methods which are still of great importance towards realistic investigation of wind turbine performance. Despite the highly computational cost the CFD methods in Part IV have received increasing interest from the academic community since they provide more detailed information about the flow field around the wind turbine. This has shed a light in combination with the correction models introduced in Part II on more advanced research for wind turbine. This book is intended for researchers and students interested in aerodynamics of wind turbine and is particularly suitable for practicing engineers in wind energy. Readers can gain a comprehensive understanding in both classical and up to date methods for the study of wind turbine aerodynamics. The authors hope that this book can promote the research and development of wind turbines.

Tropical Fruit Flies (Tephritidae Dacinae) of South-East Asia R. A. I. Drew, Meredith C. Romig, 2013 As global warming and species migration become more prevalent issues there is an urgent need for a text that provides comprehensive taxonomic details and geographic distributions of Dacinae fruit flies within south east Asia. In particular some of the major pest species of this region are being introduced on a regular basis to new geographical areas causing widespread food security issues and economic hardship. Quarantine and horticultural organizations require detailed information on these fruit fly species in order to detect and eradicate any new incursions. This major new reference work details the taxonomic research into the subfamily Dacinae which contains the tropical fruit flies of south east Asia as well as many other regions of the world. While focusing on south east Asian fauna all known species are included through a study of the type material available in museums around the world. Specimens collected in major surveys conducted across Asia from 1983 to present have also been used to ensure a complete in depth review of this subfamily. Providing complete descriptions and artwork of all species of Dacinae recorded from the south east Asian region for the first time this book is written and illustrated by experts with over 80 years combined research experience. Areas covered include India Bhutan Nepal Sri Lanka Myanmar China Taiwan Japan the Philippines Palau Vietnam Thailand Singapore Malaysia and Indonesia. It is an essential reference for departments of agriculture researchers and students of entomology and quarantine horticultural and chemical industry personnel worldwide. Key features 120
