Murray, 2018-03-22 Planetary rings are among the most intriguing structures of our solar system and have fascinated generations of astronomers Collating emerging knowledge in the field this volume reviews our current understanding of ring systems with reference to the rings of Saturn Uranus Neptune and more Written by leading experts the history of ring research and the basics of ring particle orbits is followed by a review of the known planetary ring systems All aspects of ring system science are described in detail including specific dynamical processes types of structures thermal properties and their origins and investigations using computer simulations and laboratory experiments The concluding chapters discuss the prospects of future missions to planetary rings the ways in which ring science informs and is informed by the study of other astrophysical disks and a perspective on the field s future Researchers of all levels will benefit from this thorough and engaging presentation **The Importance Of Iron In Pathophysiologic Conditions** Raffaella Gozzelino, Paolo Arosio, 2015-06-09 The iron element Fe is strictly required for the survival of most forms of life including bacteria plants and humans Fine tuned regulatory mechanisms for Fe absorption mobilization and recycling operate to maintain Fe homeostasis the disruption of which leads to Fe overload or Fe depletion Whereas the deleterious effect of Fe deficiency relies on reduced oxygen transport and diminished activity of Fe dependent enzymes the cytotoxicity induced by Fe overload is due to the ability of this metal to act as a pro oxidant and catalyze the formation of highly reactive hydroxyl radicals via the Fenton chemistry This results in unfettered oxidative stress generation that by inducing protein lipid and DNA oxidation leads to Fe mediated programmed cell death and organ dysfunction Major and systemic Fe overloads occurring in hemochromatosis and Fe loading anemias have been extensively studied However localized tissue Fe overload was recently associated to a variety

of pathologies such as infection inflammation cancer cardiovascular and neurodegenerative disorders In keeping with the existence of cross regulatory interactions between Fe homeostasis and the pathophysiology of these diseases further investigations on the mechanisms that provide cellular and systemic adaptation to tissue Fe overload are instrumental for future therapeutic approaches Thus we encourage our colleagues to submit original research papers reviews perspectives methods and technology reports to contribute their findings to a current state of the art on a comprehensive overview of the importance of iron metabolism in pathophysiologic conditions The art of The Faerie Queene Richard Danson
