Rosenberg,Lenwood S. Heath,2022-08-09 Computation theory is a discipline that uses mathematical concepts and tools to expose the nature of computation and to explain a broad range of computational phenomena Why is it harder to perform some computations than others Are the differences in difficulty that we observe inherent or are they artifacts of the way we try to perform the computations How does one reason about such questions This unique textbook strives to endow students with conceptual and manipulative tools necessary to make computation theory part of their professional lives The work achieves this goal by means of three stratagems that set its approach apart from most other texts on the subject For starters it develops the necessary mathematical concepts and tools from the concepts simplest instances thereby helping students

gain operational control over the required mathematics Secondly it organizes development of theory around four pillars enabling students to see computational topics that have the same intellectual origins in physical proximity to one another Finally the text illustrates the big ideas that computation theory is built upon with applications of these ideas within practical domains in mathematics computer science computer engineering and even further afield Suitable for advanced undergraduate students and beginning graduates this textbook augments the classical models that traditionally support courses on computation theory with novel models inspired by real modern computational topics such as crowd sourced computing mobile computing robotic path planning and volunteer computing Arnold L Rosenberg is Distinguished Univ Professor Emeritus at University of Massachusetts Amherst USA Lenwood S Heath is Professor at Virginia Tech Blacksburg USA
