Center NSRC is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8. The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards. This completely new guide follows on the success of *Resources for Teaching Elementary School Science*, the first in the NSRC series of annotated guides to hands-on inquiry-centered curriculum materials and other resources for science teachers. The curriculum materials in the new guide are grouped in five chapters by scientific area: Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type: core materials, supplementary units, and science activity books. Each annotation of curriculum material includes a recommended grade level, a description of the activities involved, and of what students can be expected to learn; a list of accompanying materials; a reading level; and ordering information. The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly relevant to middle school science. Among these is a chapter on educational software and multimedia programs; chapters on books about science and teaching; directories and guides to science trade books and periodicals for teachers and students; Another section features institutional resources. One chapter lists about 600 science centers, museums, and zoos where teachers can take middle school students for interactive science experiences. Another chapter describes nearly 140 professional associations and U.S. government agencies that offer resources and assistance. Authoritative, extensive, and thoroughly indexed, and the only guide of its kind, *Resources for Teaching Middle School Science* will be the most used book on the shelf for science teachers, school administrators, teacher trainers, science curriculum specialists, advocates of hands-on science teaching, and concerned parents.

Making Standards Useful in the Classroom
Robert J. Marzano, Mark W. Haystead, 2008-03-15

Has the standards movement in the United States led to improved classroom instruction and effective assessment? In too many cases, the answer is no. As authors Robert J. Marzano and Mark W. Haystead explain, two major reasons account for this situation: state and national standards documents typically identify far more content than teachers can actually teach during a school year, and the standards are not written in a manner that supports effective instruction and assessment. In *Making Standards Useful in the Classroom*, Marzano and Haystead present a way to convert standards documents into a format that teachers can actually use to guide instruction and to create meaningful formative assessments. In Part I of this practical guide, teachers, administrators, and curriculum specialists will find answers to questions such as these: What are the steps to follow in unpacking and rewriting standards so they are useful for classroom teachers? What is a measurement topic, and what kind of content should it include? How can measurement topics be organized into a coherent system for learning and assessment? Why is averaging a flawed method for calculating grades? What

is the best way to assess learning and determine a grade that accurately represents students growth in knowledge and skill Part II of the book consists of scoring scales with sample measurement topics for language arts math science and social studies for kindergarten through 8th grade and sample measurement topics for life skills for kindergarten through 12th grade Using the samples as a guide districts and schools can create their own systems for translating standards into useful components of effective instruction and formative assessment that truly drive student learning Note This product listing is for the Adobe Acrobat PDF version of the book
