Urban transport systems worldwide are faced by a multitude of challenges Among the most visible of these are the traffic gridlocks experienced on city roads and highways all over the world The prescribed solution to transport problems in most cities has thus been to build more infrastructures for cars with a limited number of cities improving public transport systems in a sustainable manner However a number of challenges faced by urban transport systems such as greenhouse gas emissions noise and air pollution and road traffic accidents do not necessarily get solved by the construction of new infrastructure *Planning and Design for Sustainable Urban Mobility* argues that the development of sustainable urban

transport systems requires a conceptual leap The purpose of transportation and mobility is to gain access to destinations activities services and goods Thus access is the ultimate objective of transportation As a result urban planning and design should focus on how to bring people and places together by creating cities that focus on accessibility rather than simply increasing the length of urban transport infrastructure or increasing the movement of people or goods Urban form and the functionality of the city are therefore a major focus of this report which highlights the importance of integrated land use and transport planning This new report of the United Nations Human Settlements Programme UN Habitat the world's leading authority on urban issues provides some thought provoking insights and policy recommendations on how to plan and design sustainable urban mobility systems The Global Report on Human Settlements is the most authoritative and up to date global assessment of human settlements conditions and trends Preceding issues of the report have addressed such topics as Cities in a Globalizing World The Challenge of Slums Financing Urban Shelter Enhancing Urban Safety and Security Planning Sustainable Cities and Cities and Climate Change

Klinger, 2018-01-15. *Rare Earth Frontiers* is a work of human geography that serves to demystify the powerful elements that make possible the miniaturization of electronics, green energy, and medical technologies, and essential telecommunications and defense systems. Julie Michelle Klinger draws attention to the fact that the rare earths we rely on most are as common as copper or lead, and this means the implications of their extraction are global. Klinger excavates the rich historical origins and ongoing ramifications of the quest to mine rare earths in ever more impossible places. Klinger writes about the devastating damage to lives and the environment caused by the exploitation of rare earths. She demonstrates in human terms how scarcity myths have been conscripted into diverse geopolitical campaigns that use rare earth mining as a pretext to capture spaces that have historically fallen beyond the grasp of centralized power. These include legally and logistically forbidding locations in the Amazon, Greenland, and Afghanistan, and on the Moon. Drawing on ethnographic, archival, and interview data gathered in local languages and offering possible solutions to the problems it documents, this book examines the production

of the rare earth frontier as a place a concept and a zone of contestation sacrifice and transformation **Hans-Jürgen Syberberg, the Film Director as Critical Thinker** Xue Lan Rong, Jeremy Hilburn, 2016-12-27 Fourth wave immigration with its vast economic ethnic cultural linguistic and religious diversities have brought new dynamics into the existing social and demographic structures and added both opportunities and challenges to educational systems in North Carolina a Southern U S state with the fastest growing rate of foreign born population in the nation in 1990 2010 and unique geopolitical history This book brings together 17 scholars who have extensive experience working with immigrants in North Carolina and represent a wide range of educational expertise Together their studies illustrate the intersections between historical contexts geopolitical historical constraints structural factors power policies and laws institutions and organization cultural issues philosophies ideologies identities beliefs values and traditions and immigrant students characteristics on the development of educational practices policies reforms and resistance div Most importantly studying how North Carolina education systems and actors adapt to meet the challenges may offer valuable opportunities for researchers to understand the transformation of educational systems in other new gateway states Collectively studies in this book deconstruct the framework of the traditional hierarchical assimilation and linguisticism policies in recasting the concept of becoming Americans in the New South The authors utilize frameworks that recognize the structural barriers that disadvantage immigrants in new gateway states but also position youth families and communities as possessing and utilizing valuable resources to promote educational access and achievement In this sense this book contributes significantly to major contemporary empirical and theoretical debates relating to educating immigrant children It is our hope that this critical dialogue will continue at a national platform to promote discussion of these timely issues div div **Education in a Digital World** Neil Selwyn, 2013 Drawing on a wealth of theoretical and empirical work Education in a Digital World tackles a number of pressing questions such as how are global trends in educational technology refracted through national policies and processes How exactly are educational technologies linked to issues of global economics and the fortunes of national and international economies To what extent are digital technologies implicated in the commercialisation marketization and commodification of education These questions and others are addressed throughout eight wide ranging chapters which consider topics such as the national policy strategies of countries across North and South America Europe and East Asia the educational technology portfolios of international organizations such as the United Nations and Microsoft as well as the role of education and technology in international development and the on going efforts to provide one laptop per child across low income regions and countries Through these examples Selwyn develops a detailed analysis of education technology and globalisation drawing together arguments and debates from various academic perspectives Written in a detailed but accessible manner this is an essential book for anyone wishing to gain a better understanding of the role of education and technology in contemporary globalised society Differentiation in Middle and High School Kristina J.
