The Green Stone Age: Exploration and Exploitation of Minerals for Green Technologies M. Smelror, K. Hanghøj, H. Schiellerup, 2023-06-21 Raw materials have been essential in the development of all human societies through history and moving into a greener more carbon lean future we become increasingly reliant on access to a growing number of raw materials Minerals for new technologies improving the quality of our lives and the environment are the building blocks of the new Green Stone Age This Special Publication presents ongoing research and mapping programmes focusing on minerals needed for the transformation to greener societies In addition to new exploration models and shared geological information on the different prospective currently mined areas the notion of criticality in different countries is discussed and examples of ongoing national and cross country research and mapping programmes are presented In addition to the resource reserve and technical economic aspects the social and environmental dimensions are also a focus in some of the contributions as holistic approaches to the exploration and exploitation of critical minerals and materials are needed to fulfil the green transition and goals for the Green Stone Age

Lamprophyres, Lamproites and Related Rocks L. Krmíček, N.V. Chalapathi Rao, 2022-02-09 Paleoproterozoic to Cenozoic lamprophyres lamproites and related rock types e g orangeites kimberlites are volatile rich mafic magmatic rocks with a unique potential for the investigation of processes affecting mantle reservoirs They originated from primary mantle derived melts that intruded both cratons and off craton regions which were parts of former supercontinents Columbia Rodinia and Gondwana Pangea Well known for hosting economic minerals and elements such as diamonds base metals gold and platinum group elements they are also significant for our understanding of deep mantle processes such as mantle metasomatism and mantle plume lithosphere interactions as well as large scale geodynamic processes such as subduction related tectonics and supercontinent amalgamation and break up This book aims to provide a timely overview of the state of the art and recent advances as achieved by various research groups around the world Mineralogical geochemical geochronological and isotope analyses are used to decipher the complex petrogenesis and metallogenesis of these extraordinary rocks and unravel a complete history of tectonic events related to individual supercontinent cycles

examples are presented particularly of areas likely to host Carlin type gold deposits The two volumes contain a wealth of data on specifically named mines as well as technical information on high potential areas for exploration The book is profusely illustrated with full color maps photographs and charts for geology and mining engineering A searchable CD accompanies the book and includes the full text of papers from the printed book as well as abstracts and information from poster sessions not found in the printed book Chapters in the text are fully refereed versions of presentations originally delivered at a symposium supported by the Geological Society of Nevada along with the United States Geological Survey Society of Economic Geologists and the Nevada Bureau of Mines Sample key words metallogeny gold epithermal ore magmatism Carlin trend square array void mapping SAVM porphyry copper tungsten orogeny lithogeochemistry 3 D resistivity and modeling fault surface mapping airborne electromagnetics and more The CD ROM displays figures and illustrations in articles in full color along with a title screen and main menu screen Each user can link to all papers from the Table of Contents and Author Index and also link to papers and front matter by using the global bookmarks which allow navigation of the entire CD ROM from every article Search features on the CD ROM can be by full text including all key words article title author name and session title The CD ROM has Autorun feature for Windows 2000 or higher products and can also be used with Macintosh computers The CD includes the program for Adobe Acrobat Reader with Search 11 0 One year of technical support is included with your purchase of this product

Basin Analysis Philip A. Allen, John R. Allen, 2013-05-30 *Basin Analysis* is an advanced undergraduate and postgraduate text aimed at understanding sedimentary basins as geodynamic entities The rationale of the book is that knowledge of the basic principles of the thermo mechanical behaviour of the lithosphere the dynamics of the mantle and the functioning of sediment routing systems provides a sound background for studying sedimentary basins and is a pre requisite for the exploitation of resources contained in their sedimentary rocks The third edition incorporates new developments in the burgeoning field of basin analysis while retaining the successful structure and overall philosophy of the first two editions The text is divided into 4 parts that establish the geodynamical environment for sedimentary basins and the physical state of the lithosphere followed by a coverage of the mechanics of basin formation an integrated analysis of the controls on the basin fill and its burial and thermal history and concludes with an application of basin analysis principles in petroleum play assessment including a discussion of unconventional hydrocarbon plays The text is richly supplemented by Appendices providing mathematical derivations of a wide range of processes affecting the formation of basins and their sedimentary fills Many of these Appendices include practical exercises that give the reader hands on experience of quantitative solutions to important basin analysis processes Now in full colour and a larger format this third edition is a comprehensive update and expansion of the previous editions and represents a rigorous yet accessible guide to problem solving in this most integrative of geoscientific disciplines Additional resources for this book can be found at www.wiley.com/go/allen/basinanalysis

From Terranes to Terrains Adam M. Booth, Anita L. Grunder, 2021-11-10 The eight field

trips in this volume associated with GSA Connects 2021 held in Portland Oregon USA reflect the rich and varied geological legacy of the Pacific Northwest The western margin of North America has had a complex subduction and transform history throughout the Phanerozoic building a collage of terranes The terrain has been modified by Cenozoic sedimentation magmatism and faulting related to Cascadia subduction passage of the Yellowstone hot spot and north and westward propagation of the Basin and Range province The youngest flood basalt province on Earth also inundated the landscape while the mighty Columbia watershed kept pace with arc construction and funneled epic ice age floods from the craton to the coast Additional erosive processes such as landslides continue to shape this dynamic geological wonderland *Geophysics & Tectonics Abstracts* ,1987 Who's who in America ,1954 **Physical Science** ,1981 **Harcourt Science, Grade 1**
